

 ASAM	List of Known Issues		
	Standard	ASAM ODS	Version

ID 3512	Title
	The Use of '-' Versus '_' in the AS NVH is Ambiguous
ID 3733	Description
	<p>The MIME type suffix "parameterset_at_parent" appears two times in the ASAM ODS associate standard "NVH Model" in chapter 3.3.1.1 and 17 times in the ASAM ODS base standard at chapter 10, while for the same purpose the MIME type suffix "parameterset-at-parent" appears three times in the ASAM ODS associate standard "NVH Model" in chapter 3.3.1.2, Fig. 5, Fig. 6, Fig. 7 (2x), Fig. 13 and Fig. 14.</p> <p>It will be clarified which of the notations is the correct one.</p>
ID 3733	Title
	Incomplete Blocks in External File Components Referenced by ATF/XML Files
ID	Description
	<p>Values of a local column in an ATF/XML component may be linked to an external binary file that contains the actual values. Chapter 7 "The ASAM Transport Format in XML (ATF/XML)" does not explicitly specify, that blocks must be completely written, e.g. data blocks for the same local column must all have the same size.</p> <p>It has been observed, that some ATFX-file generators write files with references to external data files with an incomplete final block. Importers detect the incomplete final block and terminate with an error. They require all data blocks for the same local column to have all the exact same size.</p> <p>The standard shall clarify, whether blocks of different sizes for a local column are permitted and under which condition different sizes are permitted, e.g. only the last block in an external file might have a different size.</p>

 ASAM	List of Known Issues		
	Standard	ASAM ODS	Version

About This Document

This document lists known issues for the standard and version as identified in the document header. Issues in the context of ASAM standards have one of the following characteristics:

- Error: unintended or wrong content.
- Contradiction: inconsistent or contradictory content.
- Specification gap: missing content required for a functional system and for complete understanding.
- Lack of clarity: Unclear, vague or ambiguous description, which leads to misunderstandings and misinterpretations.

The issue may exist in the base standard, in associate standards, schema files, interface definition files, model files, examples or any other supplements of the standard.

For each issue, the table contains an ID, title and description.

ID: Unique identification number assigned by the ASAM change request system.

Title: Summary of the issue description in headline style.

Description: Identifies the parts of the standard that are affected by the issue, provides a reason why this is considered as an issue and allows the reader to understand the technical implications of the issue. Optionally, the description includes a resolution proposal and a proposed workaround for the issue.

Issues are resolved in the release of a new version of a standard. Please regularly check ASAM's web page and news publications to stay informed about new versions. If an issue has been resolved in a new version, then it is not listed in the List of Known Issues document for this version any longer.

The List of Known Issues document for former versions of the same standard will be frozen and will not be further maintained. ASAM advises all users of its standards to always use the latest version of its standards.
