

Statement to the content of the OpenSCENARIO List of Features and Requirements V1.6

- As to the Driver Model(F002) and Traffic Model(F003), we assume that these two models are defined as new standard separately. OpenSCENARIO should focus on the scenario description.
- As to the Vehicle Dynamics(F006), we assume that it should be defined only as the linkage I/F of the existing standard.
- As to the High-Level Maneuver Description(F008), we need to pay very careful attention to the compatibility of the Maneuver model(F001)
- As to the High-Level Maneuver Description(F008), we assume that the language description like b) and c) allows us to use the unrestricted expression freely and easily, but on the other hand standardization itself is collapsing.

b)DSL: Domain Specific Language

c)General-purpose language and domain-API
