PROBLEM STATEMENT

PROBLEM STATEMENT

Scenario-Based Testing of Automated Driving Systems

Needed: A Set of Scenarios for Testing of Automated Driving Systems

Example: Left Turn at a T-Junction

- How can the behavior of an oncoming vehicle be described?
- How can it be parameterized?

Challenge: How can we describe scenarios explicitly?
Approach: Semantic Classification

VOLKSWAGEN

DEFINITIONS & CONCEPT

DEFINITIONS & CONCEPT

Maneuver Definition

How can behavior of traffic participants be semantically classified?

→ Maneuvers!

What characterizes a maneuver?

Definition 1. Maneuver *A maneuver is the intentional transfer of a traffic participant from one defined state into the next, which can also be identical.*

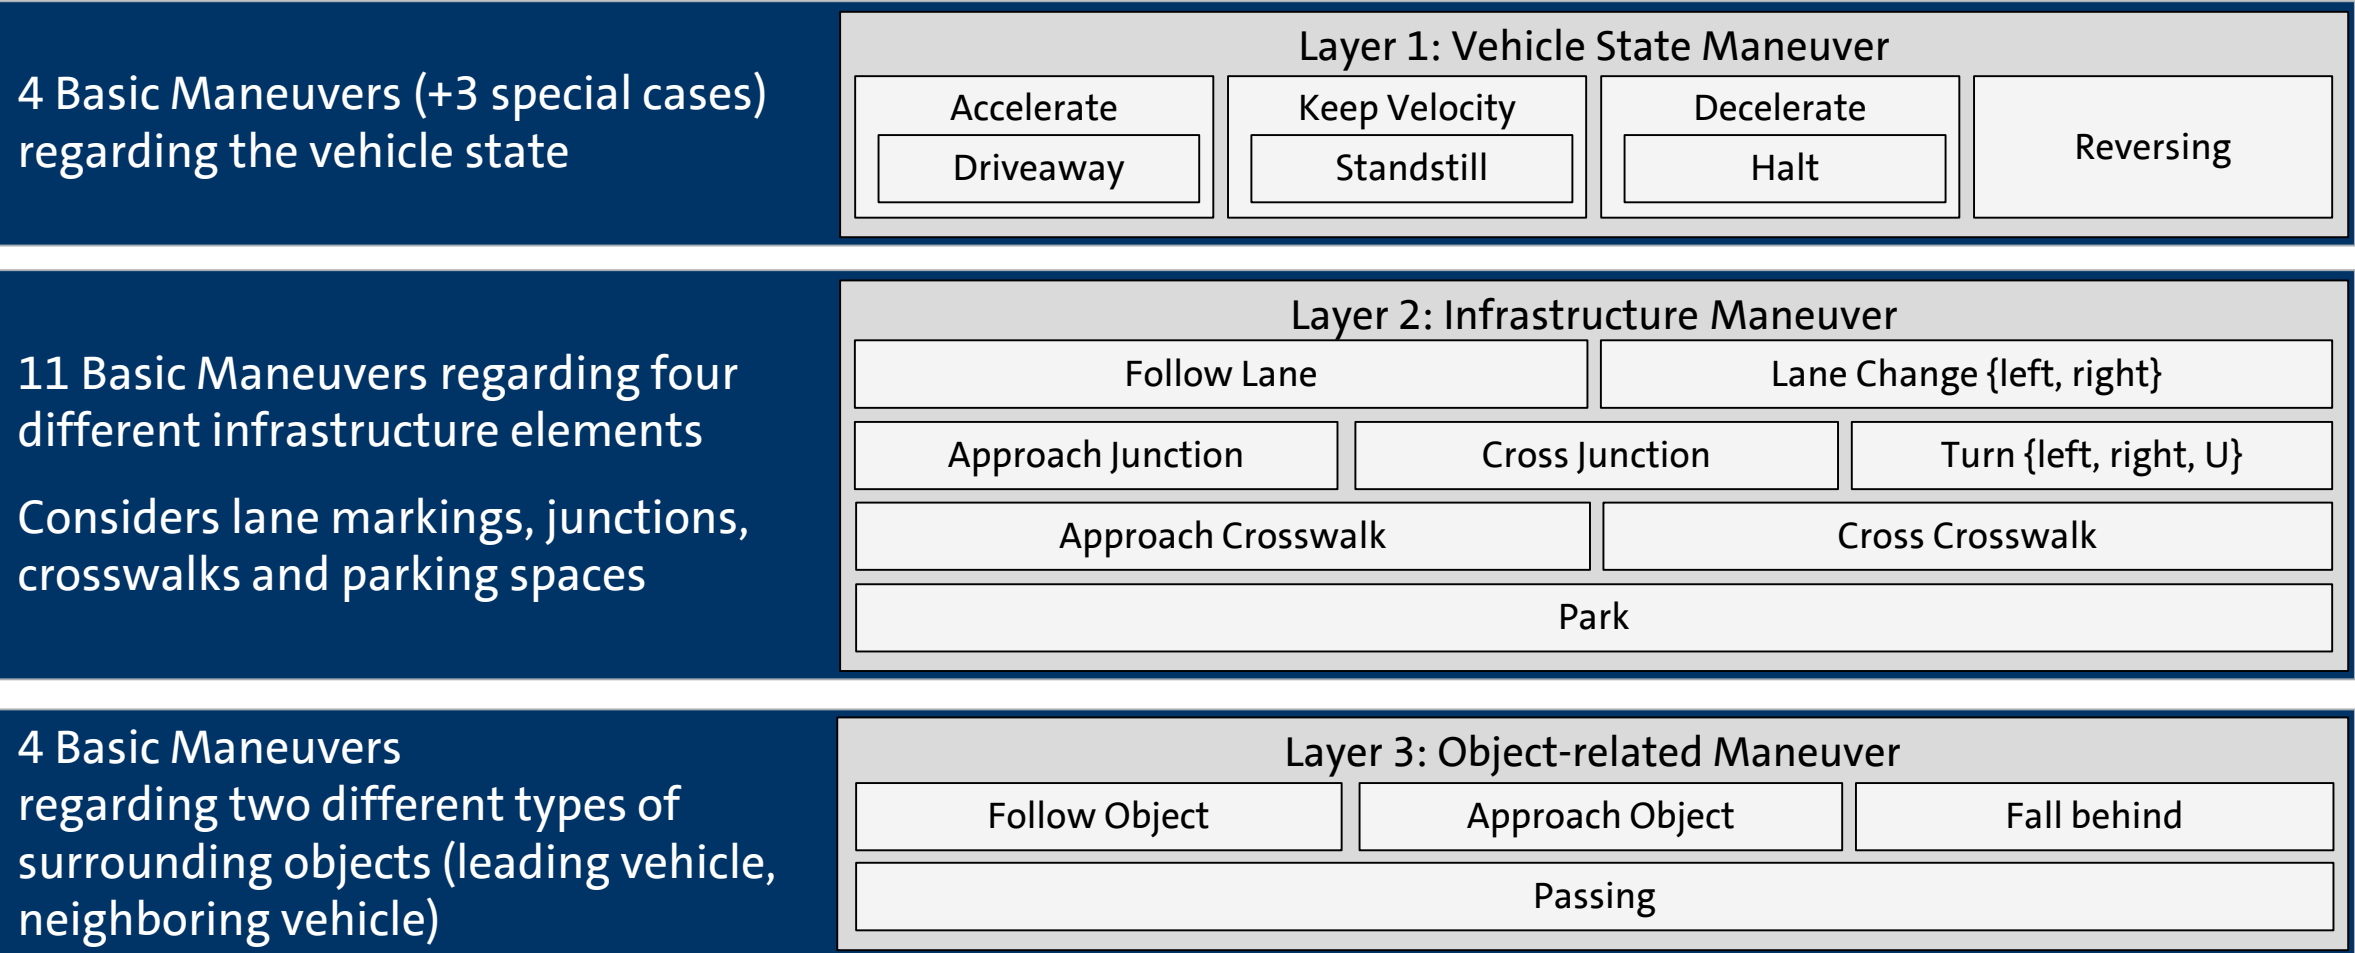

Which traffic participant states do exist? Which are useful considering the definition of maneuvers?

→ A maneuver catalog for urban traffic is needed

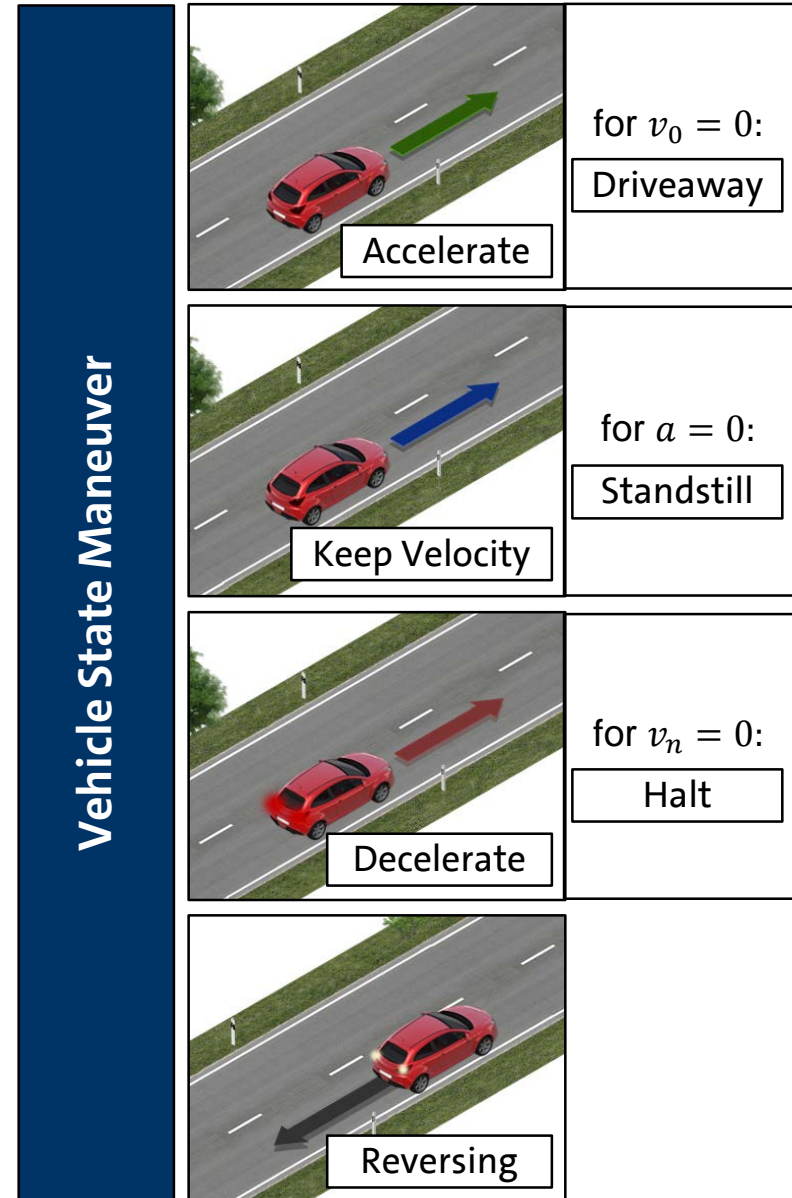

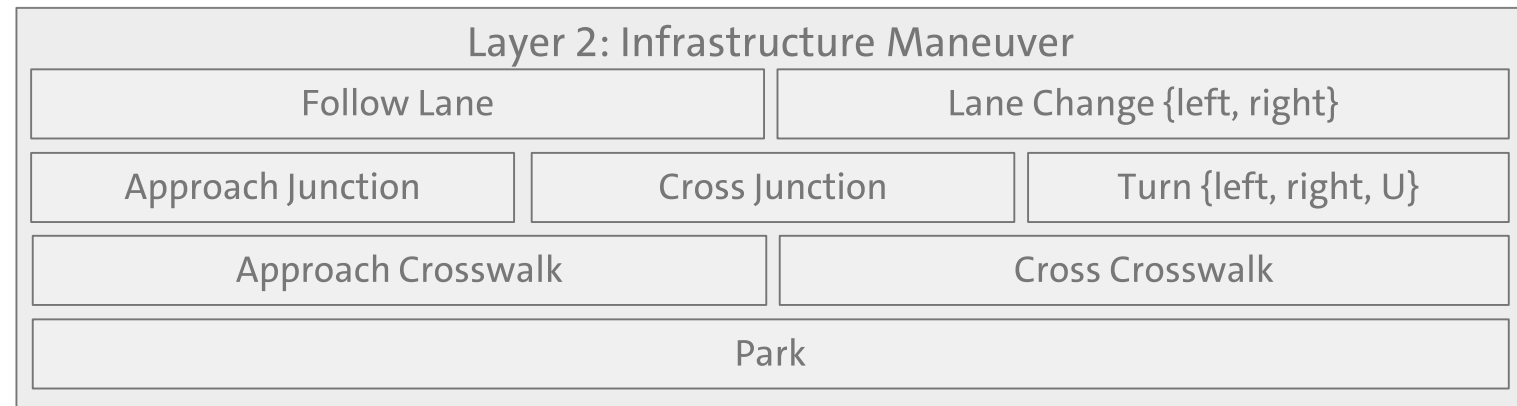

DEFINITIONS & CONCEPT

Urban Vehicle Maneuver Catalog

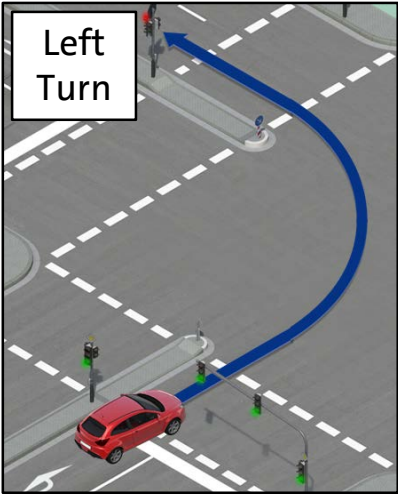

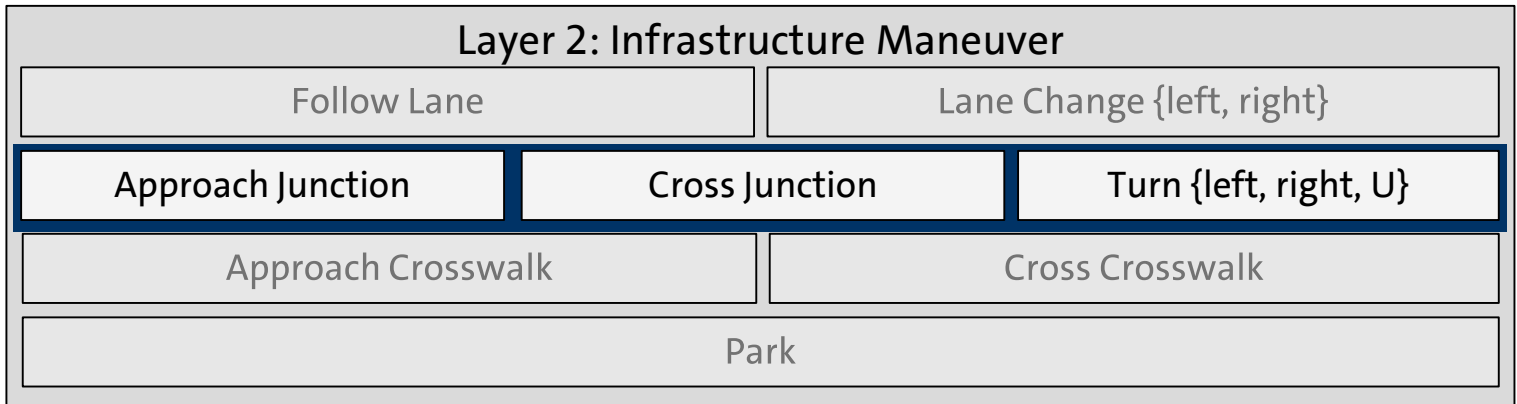

DEFINITIONS & CONCEPT

Urban Vehicle Maneuver Catalog – Vehicle State Maneuver

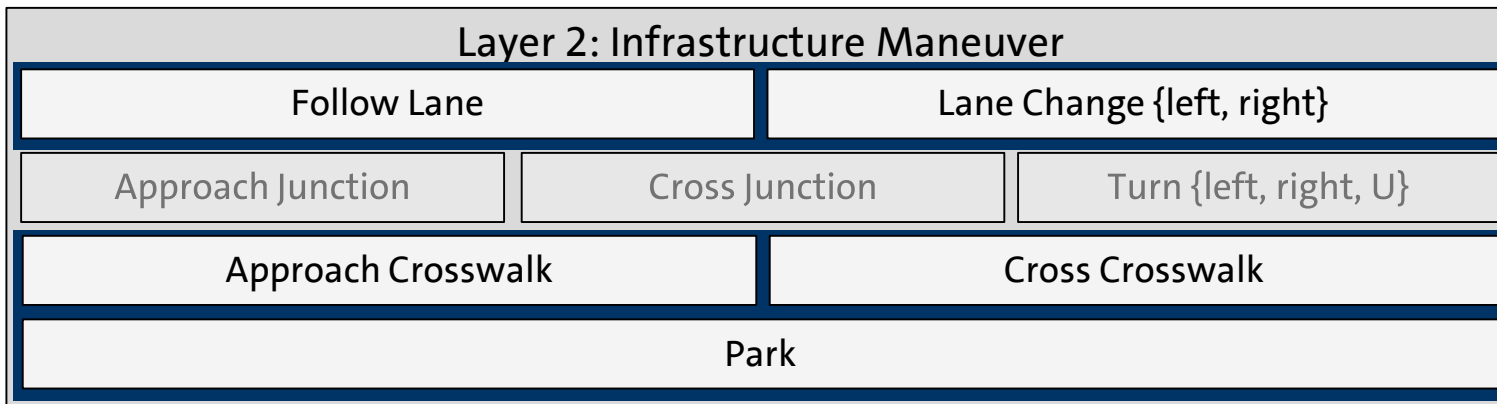

DEFINITIONS & CONCEPT

Urban Vehicle Maneuver Catalog – Infrastructure Maneuver

DEFINITIONS & CONCEPT

Urban Vehicle Maneuver Catalog – Infrastructure Maneuver

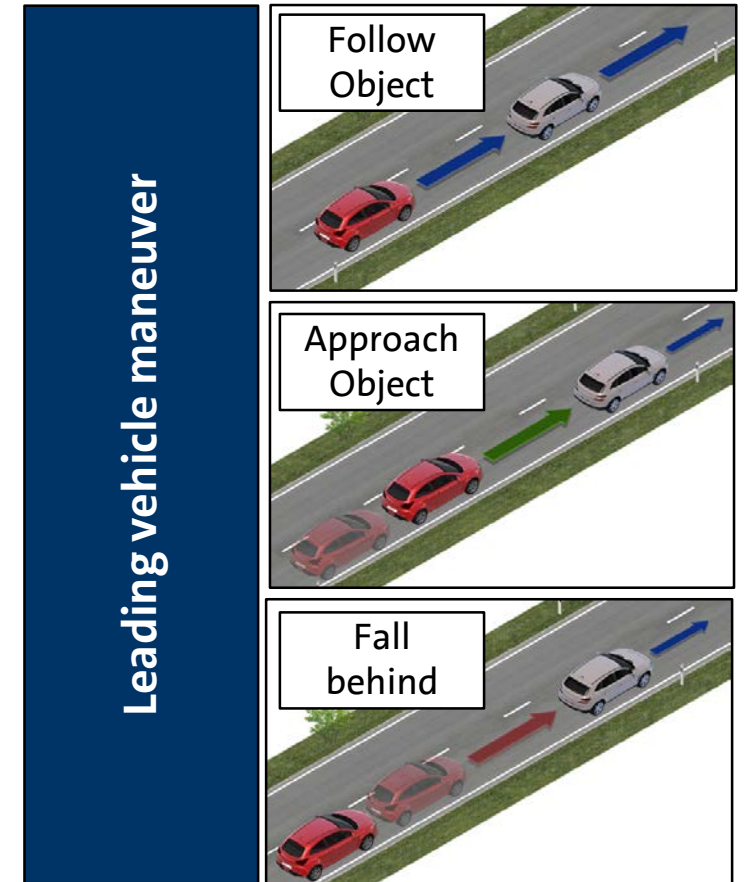

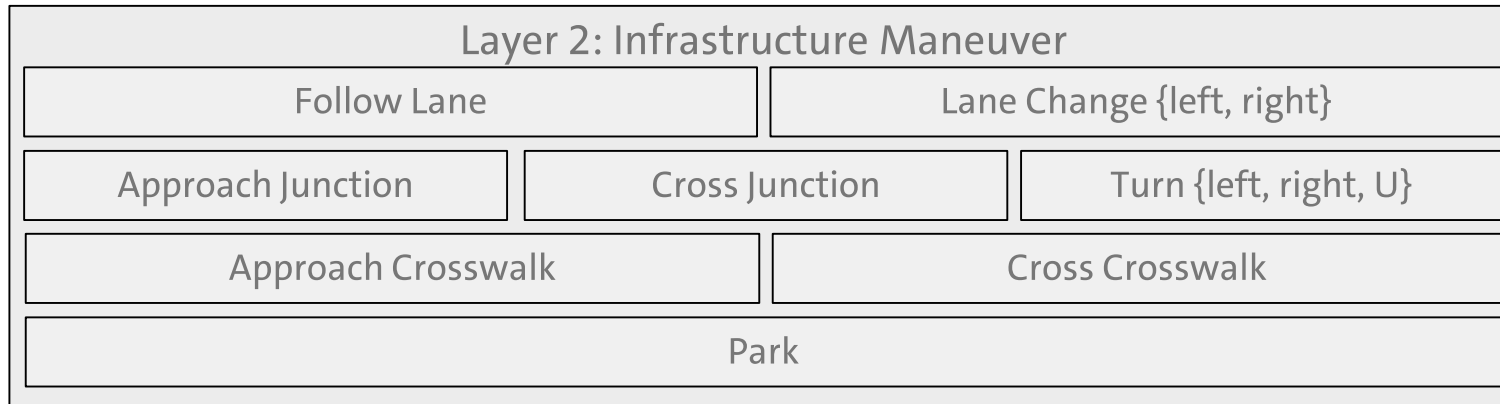

Crosswalk Maneuver

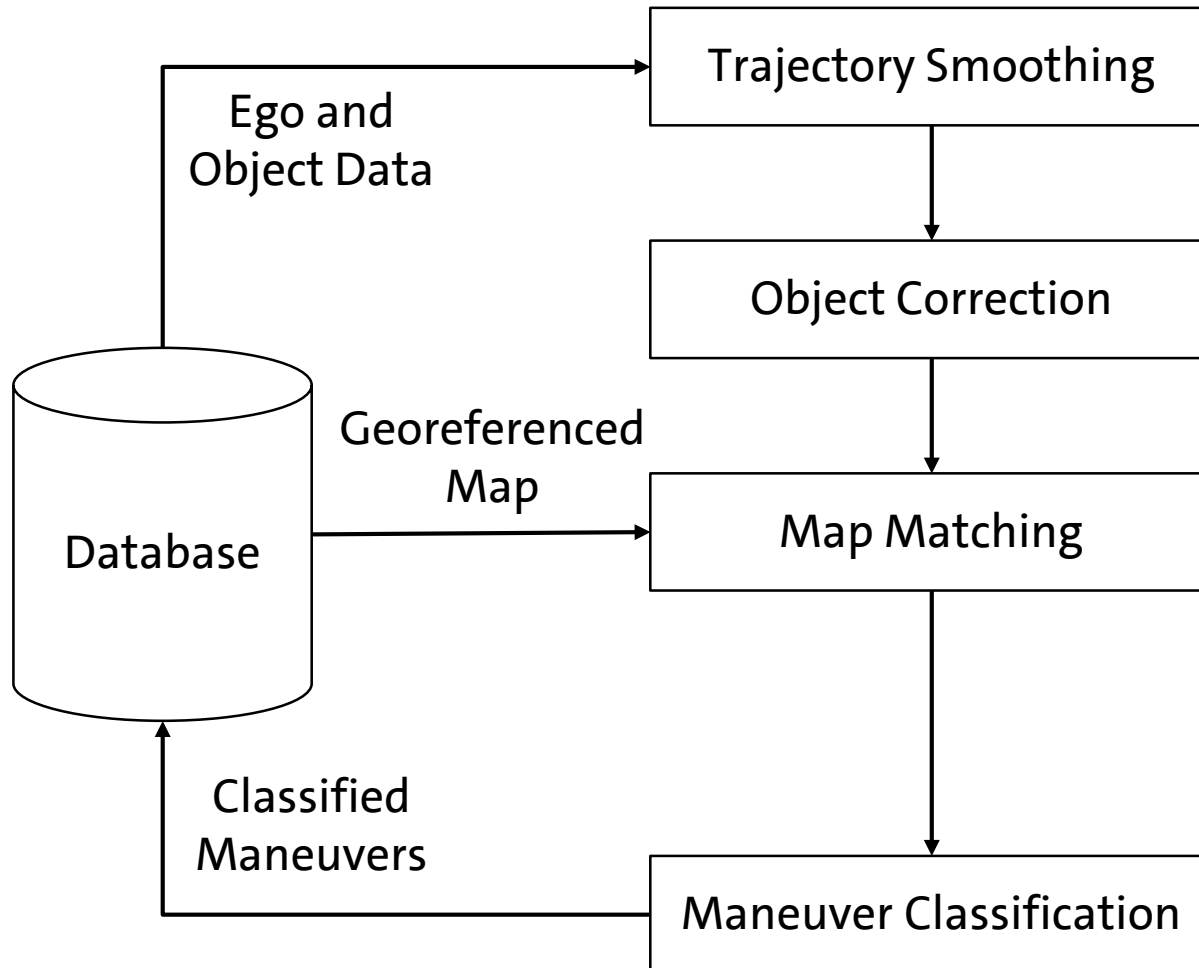

DEFINITIONS & CONCEPT

Urban Vehicle Maneuver Catalog – Object-related Maneuver

DEFINITIONS & CONCEPT

Maneuver Extraction Process

1. Record test drive and store it in the database

2. Smooth trajectories by Gaussian filtering

3. Correct static object attributes

4. Match object positions onto lanes

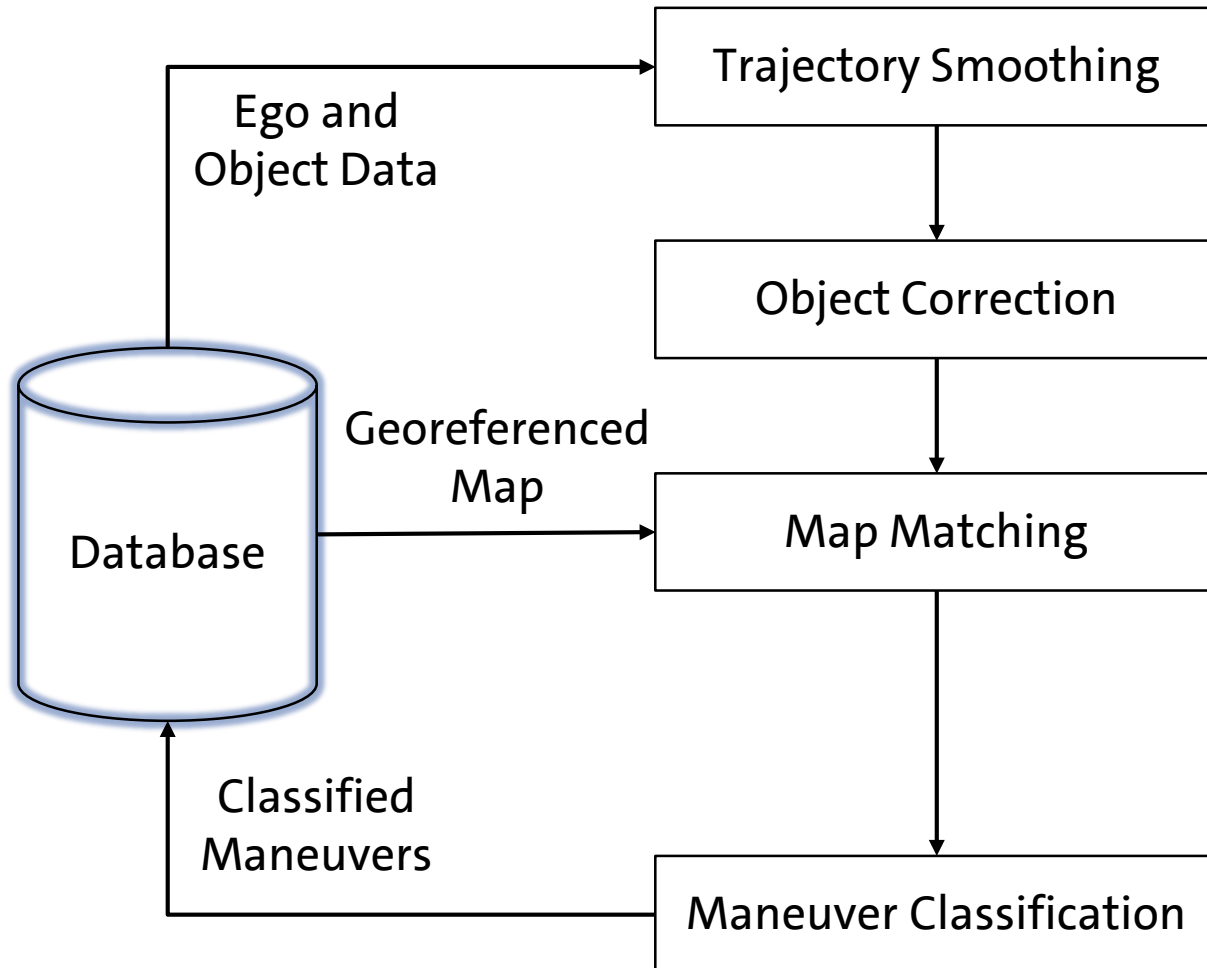

5. Rule-based maneuver classification

6. Store extracted maneuvers in database

DEFINITIONS & CONCEPT

INITIAL APPLICATION

INITIAL APPLICATION

Exemplary *Functional Scenario*: „Unprotected Left Turn“

Functional Scenario “Unprotected Left Turn”

Oncoming traffic participant either turns right or crosses junction

Unprotected Left Turns pose a challenge for Automated Driving Systems

Well-arranged dependencies:

- Ego needs to give way
- Oncoming vehicle has right of way

Influence of varying infrastructure on vehicle behavior is neglected by focusing on this fixed exemplary junction

Analyzed junction

Satellite image: <https://map.openaerialmap.org/>

INITIAL APPLICATION

Parameterization of the Maneuvers *Cross Junction* and *Right Turn*

Spatio-temporal course of both *Left Turn* and *Cross Junction* are parameterized as three-dimensional Bézier curves of third order:

$$b(t) = \sum_{i=0}^3 \binom{3}{i} t^i (1-t)^{3-i} b_i, 0 \leq t \leq 1$$

Additional trigger parameter d_{ego} to specify junction entry of oncoming vehicle relative to ego position

→ Functional Scenario consists of 13 parameters

— Cross Junction

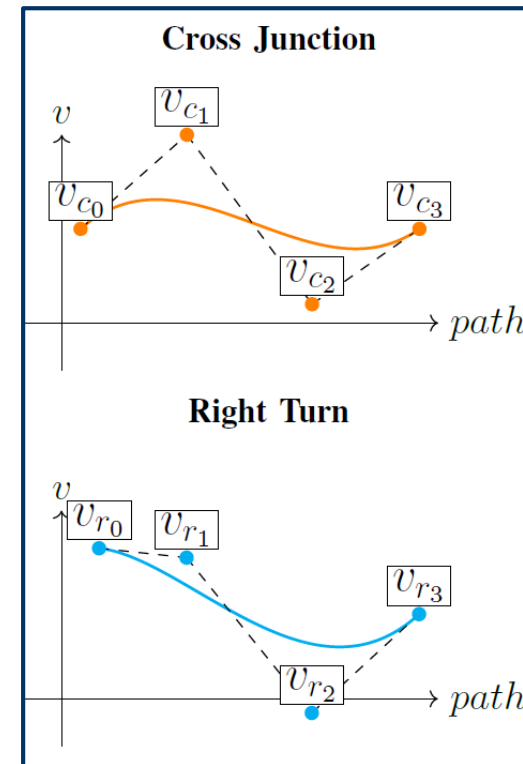

- (x_{c_0}, y_{c_0}) : Position 0
- (x_{c_1}, y_{c_1}) : Position 1
- (x_{c_2}, y_{c_2}) : Position 2
- (x_{c_3}, y_{c_3}) : Position 3

— Right Turn

- (x_{r_0}, y_{r_0}) : Position 0
- (x_{r_1}, y_{r_1}) : Position 1
- (x_{r_2}, y_{r_2}) : Position 2
- (x_{r_3}, y_{r_3}) : Position 3

— Left Turn (Ego)

Spatial
parameterization

Temporal
parameterization

Satellite image: <https://map.openaerialmap.org/>

INITIAL APPLICATION

Observed Maneuvers and resulting Parameter Distributions

Cross Junction

[m]	μ	σ	[m]	μ	σ	[m/s]	μ	σ
x_{c0}	619787.4	0.22	y_{c0}	5810521.4	1.10	v_{c0}	10.91	1.29
x_{c1}	619780.9	2.97	y_{c1}	5810563.1	15.36	v_{c1}	9.9	3.14
x_{c2}	619781.3	2.97	y_{c2}	5810564.5	6.29	v_{c2}	3.0	8.71
x_{c3}	619776.4	1.05	y_{c3}	5810593.6	1.53	v_{c3}	10.2	2.38
d_{Ego}	53.1	21.97						

Right Turn

[m]	μ	σ	[m]	μ	σ	[m/s]	μ	σ
x_{r0}	619787.7	0.88	y_{r0}	5810521.9	0.73	v_{r0}	9.4	0.44
x_{r1}	619789.7	3.09	y_{r1}	5810549.1	3.70	v_{r1}	8.9	1.47
x_{r2}	619803.9	4.97	y_{r2}	5810552.7	1.16	v_{r2}	7.2	2.39
x_{r3}	619822.2	1.67	y_{r3}	5810559.8	0.85	v_{r3}	8.1	2.23
d_{Ego}	53.2	12.00						

INITIAL APPLICATION

Resulting Parameter Distributions

Recorded trajectories are shown in color

200 new trajectories were sampled (grey)

Samples extend the parametric coverage achieved by the recordings alone

Trajectories are turned into *OpenSCENARIO* files for use in a simulation environment

Simulation of mean *Functional Scenario* „Left Turn“

CONCLUSION AND FUTURE WORK

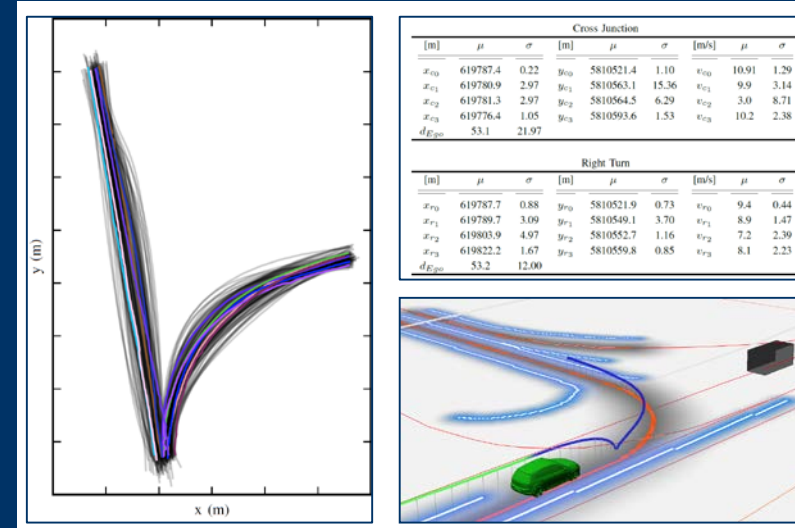

CONCLUSION

Discussion of the Initial Results

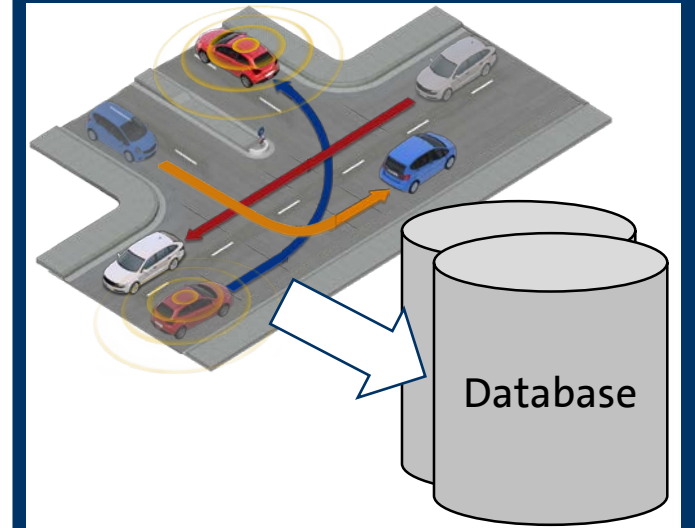

Quantification of Exposure is possible for Scenario Layer 4 (Movable Objects)

Systematic Scenario Variation for the Testing of Automated Driving Systems

Small Dataset, Results not expected to be representative

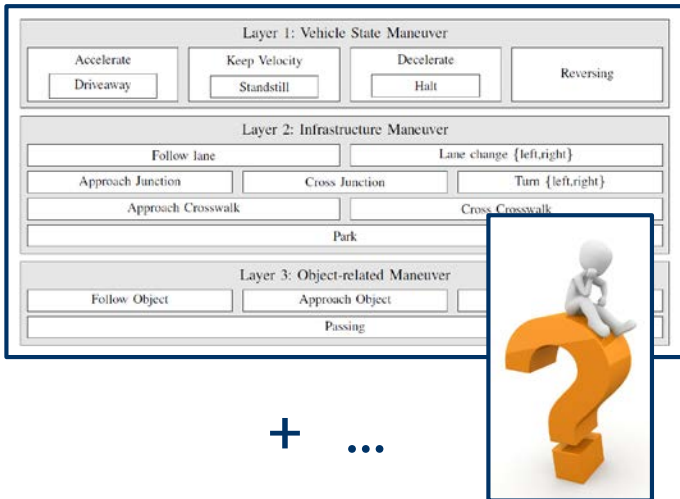

Satellite image: <https://map.openaerialmap.org/>

FUTURE WORK

Outlook

Evaluate Completeness of the Maneuver Catalog

Extend Methodology to more complex Scenarios

Ensure Representativity of the collected Dataset

→ Study Saturation Effects
