

OSI Sensor Model Validation with FMI Bench

FMI Bench, osi3test, and OSI Viewer

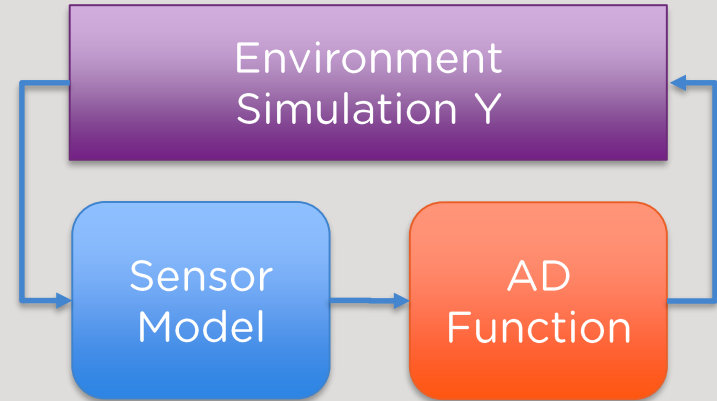

ASAM OSI Crash Course
Webinar 2020-07-29

Original Motivation - One of

Tier 1 Supplier

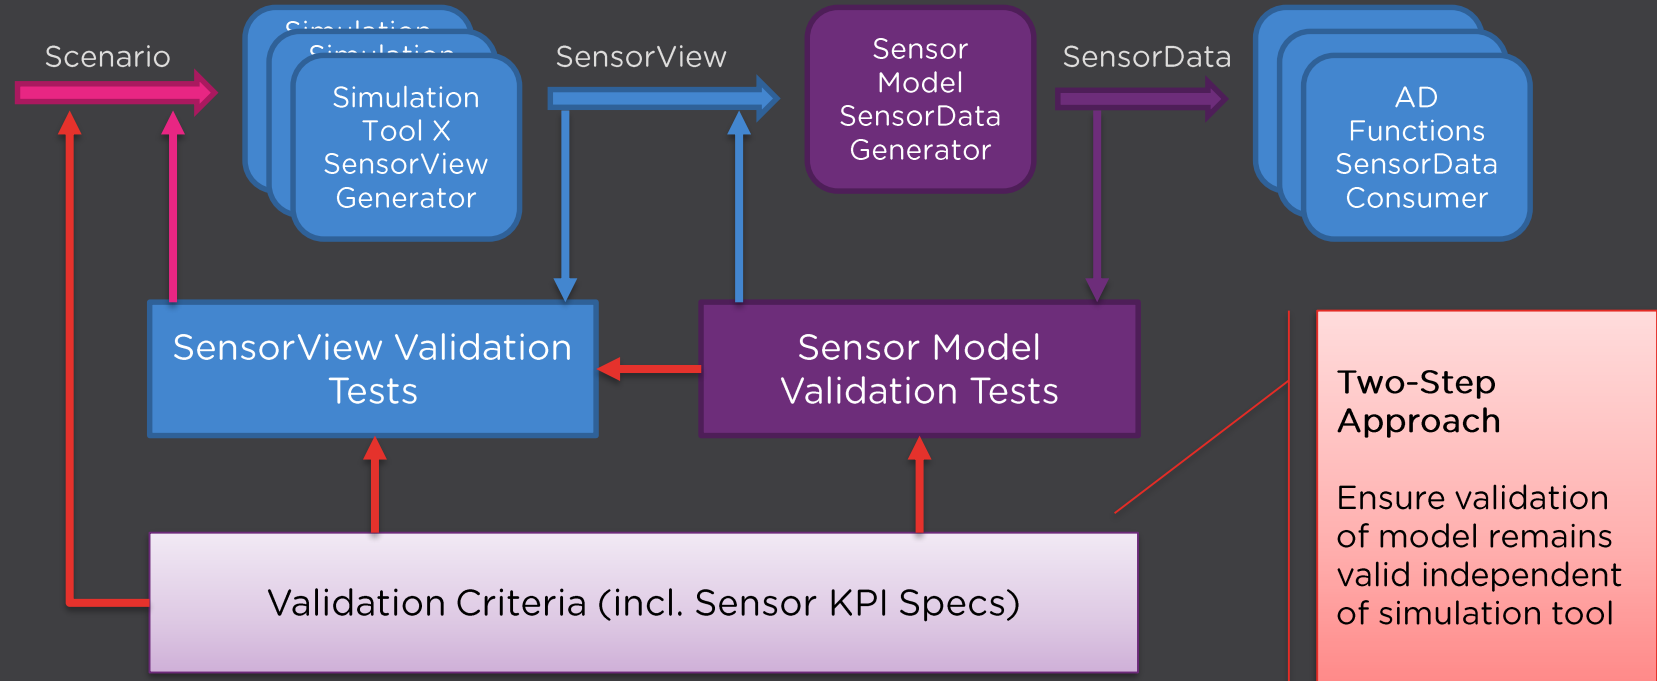

OEM

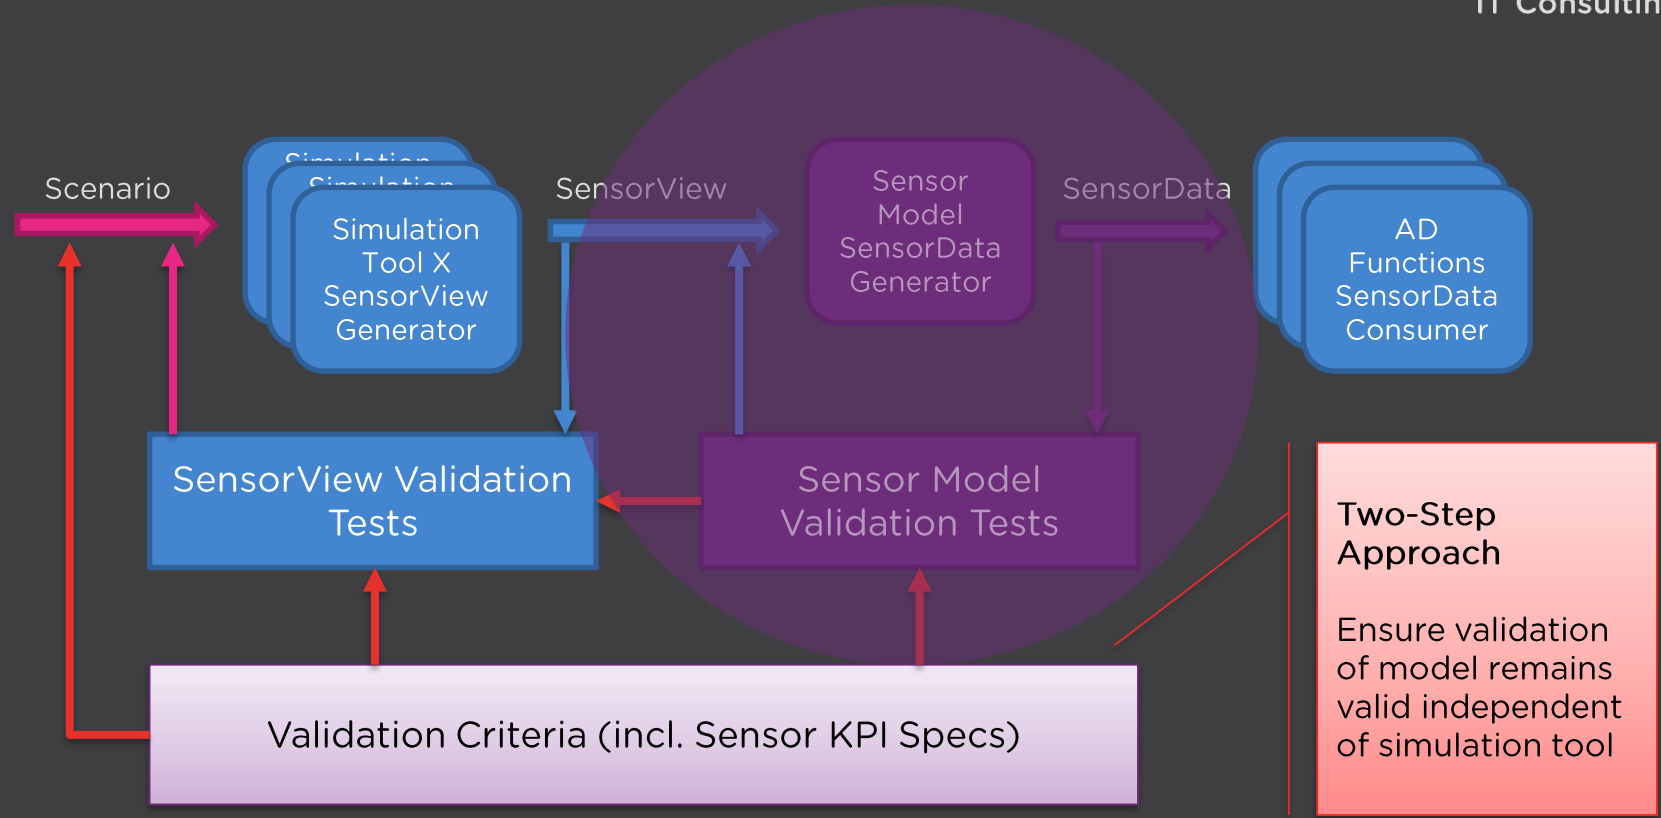

Identical Model

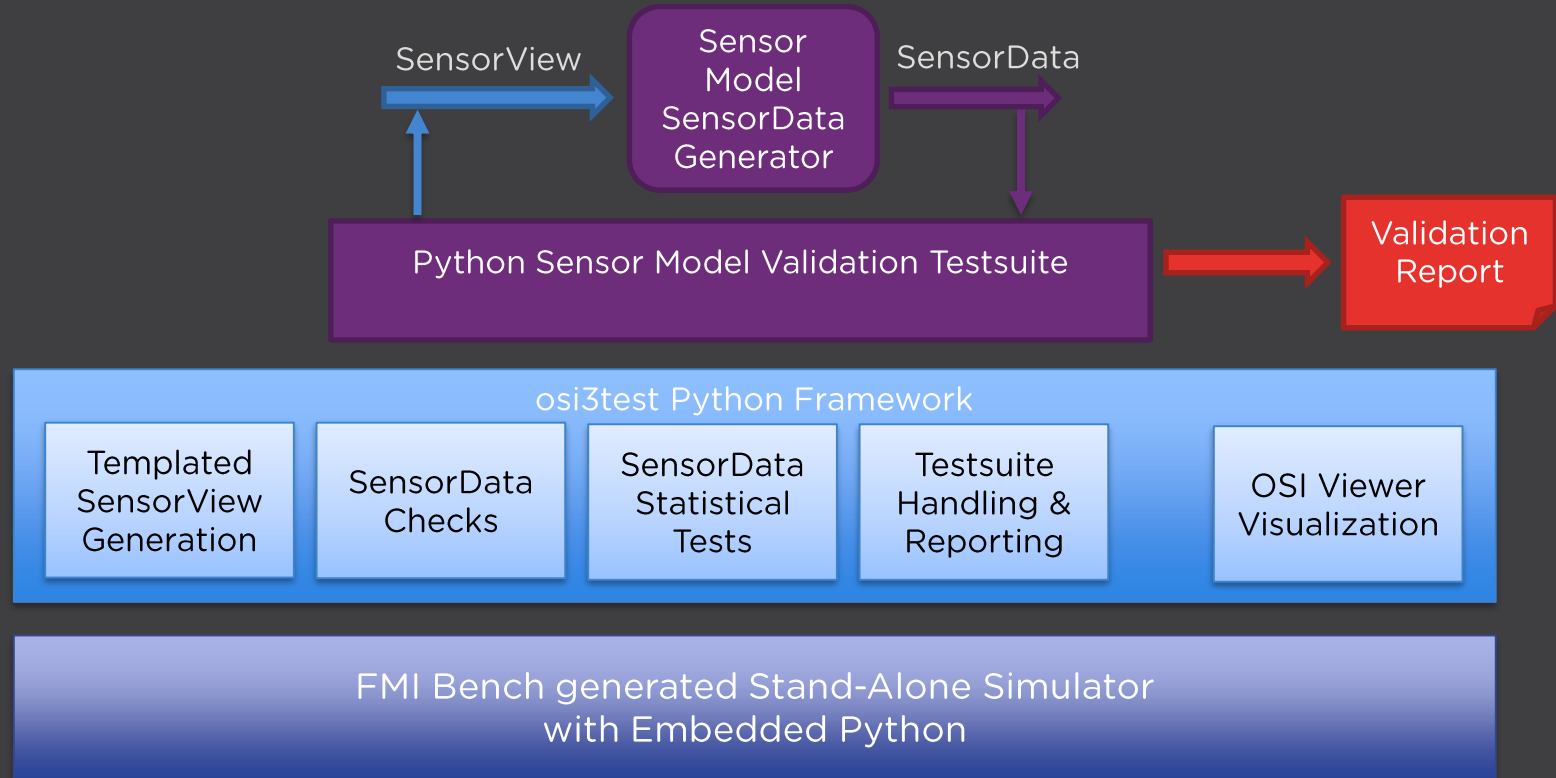

Overview: Two-Step Approach To Validation

Overview: Two-Step Approach To Validation

Sensor Model Validation: FMI Bench, osi3test, OSI Viewer

```

// straight_test.cpp
// ...
// Vehicle initialization and trajectory definition
// ...
// Sensor model validation
// ...
// Simulation start
// ...
    
```

Who is PMSF?

- **Business Focus**

Technology-driven IT consulting and software tool development to industrial customers in the areas of simulation, embedded software, safety standards, programming methodology, languages, and compilers.

- **Experience**

Principals all with more than 20 years experience in the field, active participation in leading research projects.

- **Customer Base**

Automotive OEMs & Tier1 suppliers, aerospace, and industrial customers, engineering and consulting SME

- **Operations**

Founded in 2001
2 branch offices in Germany
Headquartered in Marzling

Consulting & Software

Technical Depth

The depth of our expertise is the cornerstone of our business, from High-Level Architecture down to Low-Level Software and Hardware. We truly are the full-stack experts.

Business Focus

In order to best serve our customer base, we take a pro-active approach to developing cost-effective solutions based on our long-term experience of our customers' business environments.

Fresh Ideas

Technical progress and changing environments make new, cost-efficient approaches possible that were unthinkable only a couple of years ago. We always try to think out of the box to better leverage those changes for our customers.

Software Products

Through the development of our in-house software products FMI Bench & RFMI Server we provide access to versatile technology for working with FMI & SSP, as well as in-depth technological expertise for use in consulting projects.

PMSF FMI Bench

The Missing Link in Your FMI Strategy

Given the increasing complexity of cross-domain integration solutions based on the emerging FMI standard, there is huge potential for incompatibilities and mismatches between all the FMI-based tools in your toolchain.

PMSF FMI Bench lets you effectively link your FMI-based simulation tools through FMU conversion, editing, debugging, pre-integration and customization.

It also offers support in automating and parallelizing your cross-domain simulations on a vendor-neutral platform.

FMU Inspector & Debugging

- Inspect & Edit FMU Properties
- Inspect & Edit Definitions of Variables, Types and Units
- Advanced FMU Validity Checks
- Wrap FMUs with Logging/Profiling

FMU Pre-Integration

- Automate Integration of FMUs using Action Rules
- Export integrated projects as new FMUs
- Multi-Thread FMUs inside Project FMUs
- Convert between FMI Versions and Implementations
- Create stand-alone Simulators for Batch Simulation
- Preliminary Support for SSP/SSD Standard

FMU Customization

- Parameter Editors
- Parameter Export & Import
- Filter/Hide Exposed Parameters
- Customized FMU Wrappers
- Adaptation of FMUs to other Interface Standards
- FMU Encryption and Licensing Integration Support
