ID 3753	Title TEST-EXECUTION-PLAN and PLANNED-TEST-CASE shall reference a particular TEST-OBJECT instead of a TEST-OBJECT-SET
	Description
	The reference of TEST-EXECUTION-PLAN and PLANNED-TEST-CASE to TEST-OBJECT-SET, as shown in Figure 32 of the Programmers Guide, is questionable and should be changed to TEST-OBJECT. Furthermore, there are multiple contradictions in the standard between Programmers Guide and Reference Guide, which indicate that that TEST-EXECUTION-PLAN and PLANNED-TEST-CASE actually should refer to TEST-OBJECT.
	1. TEST-OBJECT-SET is a group of n TEST-OBJECTS, see
	TEST-OBJECT-SET=related objects under test (Reference Guide, chapter 1.389)
	TEST-OBJECT=particular test object (Reference Guide, chapter 1.390)
	 2. TEST-SPEC & TEST-CASE refer via TEST-OBJECT-REFS to a group of potential test objects, see Programmers Guide, page 35, <test-object-refs>: "This element identifies a set of test objects which can be tested by the test cases contained in a test specification."</test-object-refs>
	3. TEST-EXECUTION-PLAN & PLANNED-TEST-CASE refer via TEST-OB- JECT-REFS to one specific test object, see Programmers Guide, page 65, <test-object-refs>: "This element contains a reference to the used <test-object>."</test-object></test-object-refs>
	Contradiction: If TEST-OBJECT-REFS refers to a group of test objects (2.) and to single test objects at the same time (3.), then TEST-OBJECT-SET cannot meet this requirement simultaneously.
	There are further parts of the standard, which contradict to each other.
ID	Title
3779	TEST-EXECUTION-PLAN and PLANNED-TEST-CASE shall reference a particular TEST-ENVIRONMENT instead of a TEST-ENVIRONMENT-SET
	Description
	The reference of TEST-EXECUTION-PLAN and PLANNED-TEST-CASE to TEST-ENVIRONMENT-SET shall be changed to TEST-ENVIRONMENT. The reasoning is similar than for ID 3753.
ID	Title
3780	TEST-SPEC and TEST-CASE shall reference a particular TEST-OBJECT as well as a TEST-OBJECT-SET
	Description
	Two categories are defined for the TEST-SPEC element: ATX_TEST_SPEC and ATX_TEST_REPORT. This means that the TEST- SPEC element (and TEST-CASE) reference in the first case "a set of test objects which can be tested" and in the second case "the used test object".
ID	Title
3781	TEST-SPEC and TEST-CASE shall reference a particular TEST-ENVIRON- MENT as well as a TEST-ENVIRONMENT-SET
	Description
	Two categories are defined for the TEST-SPEC element: ATX_TEST_SPEC and ATX_TEST_REPORT. This means that the TEST- SPEC element (and TEST-CASE) reference in the first case "a set of test

About This Document

This document lists known issues for the standard and version as identified in the document header. Issues in the context of ASAM standards have one of the following characteristics:

- Error: unintended or wrong content.
- Contradiction: inconsistent or contradictory content.
- Specification gap: missing content required for a functional system and for complete understanding.
- Lack of clarity: Unclear, vague or ambiguous description, which leads to misunderstandings and misinterpretations.

The issue may exist in the base standard, in associate standards, schema files, interface definition files, model files, examples or any other supplements of the standard.

For each issue, the table contains an ID, title and description.

- ID: Unique identification number assigned by the ASAM change request system.
- Title: Summary of the issue description in headline style
- Description: Identifies the parts of the standard that are affected by the issue, provides a reason why this is considered as an issue and allows the reader to understand the technical implications of the issue. Optionally, the description includes a resolution proposal and a proposed workaround for the issue.

Issue are resolved in the release of a new version of a standard. Please regularly check ASAM's web page and news publications to stay informed about new versions. If an issue has been resolved in a new version, then it is not listed in the List of Known Issues document for this version any longer.

The List of Known Issues document for former versions of the same standard will be frozen and will not be further maintained. ASAM advises all users of its standards to always use the latest version of its standards.
