

Concept project proposal for SCDL Next Gen. SCDL-SA (Safety Analysis/Arguments)

Nobuaki Tanaka / OTSL Inc.
SCN-SG SCDL-SA Draft Team

Sep. 19th, 2023

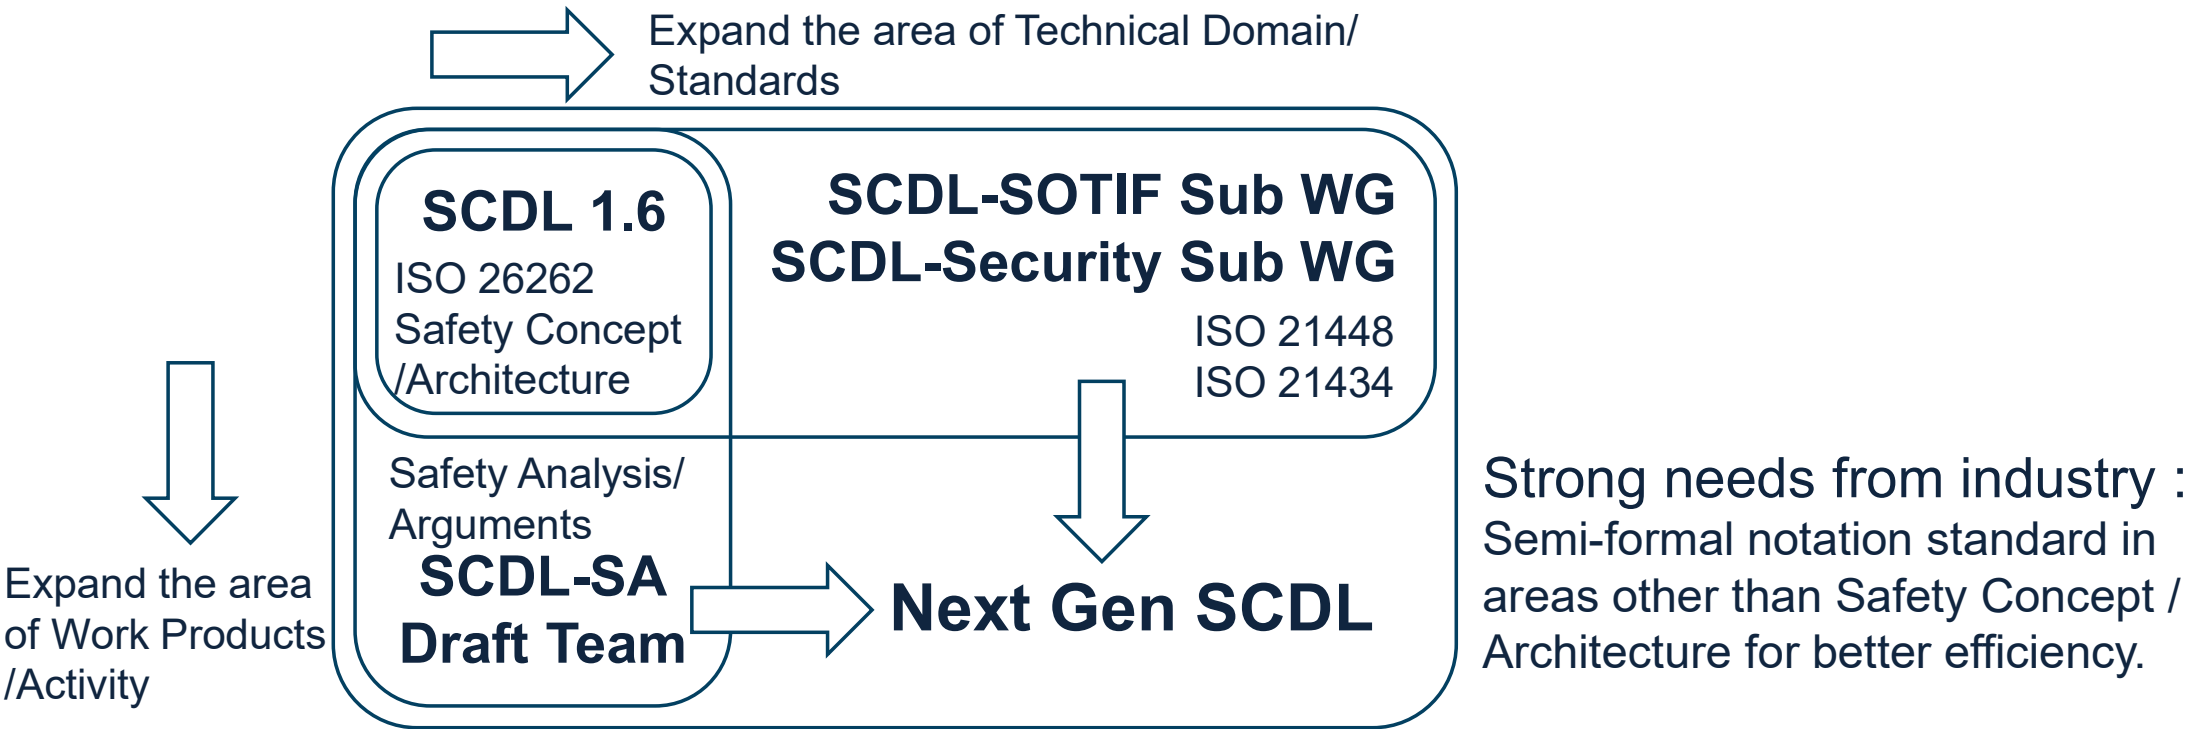

Table of Contents

- 1.What is SCDL-SA?
 - ▣ SCDL-SA Draft Team : Background, Objective, Members
 - ▣ Activities
- 2.Requirements and Discussion items
 - ▣ 2.1 Needs and HLR (High Level Requirements)
 - ▣ 2.2 Changes : SCDL1.6→SCDL Next Gen.
 - ▣ 2.3 Discussion on Representation and Metamodel
- 3.Motivation for Standardization
- 4.Use Cases

1. What is SCDL-SA?

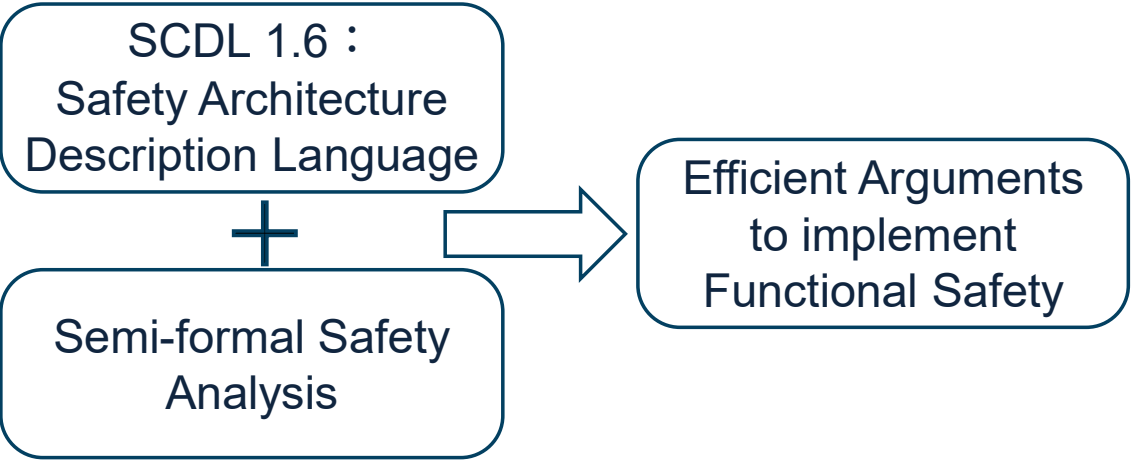

- SCDL-SA covers Safety Analysis/Safety Arguments
 - ▣ 2022/Apr. Started investigation on Semi-formal Safety Analysis with SCDL.
 - ▣ Later, expanded the discussion also on Safety Arguments
 - Utilize “Safety Concept + Safety Analysis” as Safety Arguments

SCDL-SA Draft Team in SCN-SG

- Established in April/2022
- Objectives :
 - ▣ Investigate the Semi-formal notation not covered by SCDL1.6

- Safety Analysis
- Safety Requirements
- Safety Arguments

- Members :

Toshiki Iwanaga (Change Vision)

Yoshiyuki Sasaki (Marelli)

Kenji Taguchi (UL)

Hidehori Miyamoto (Kouzou Keikaku Eng. Inc.)

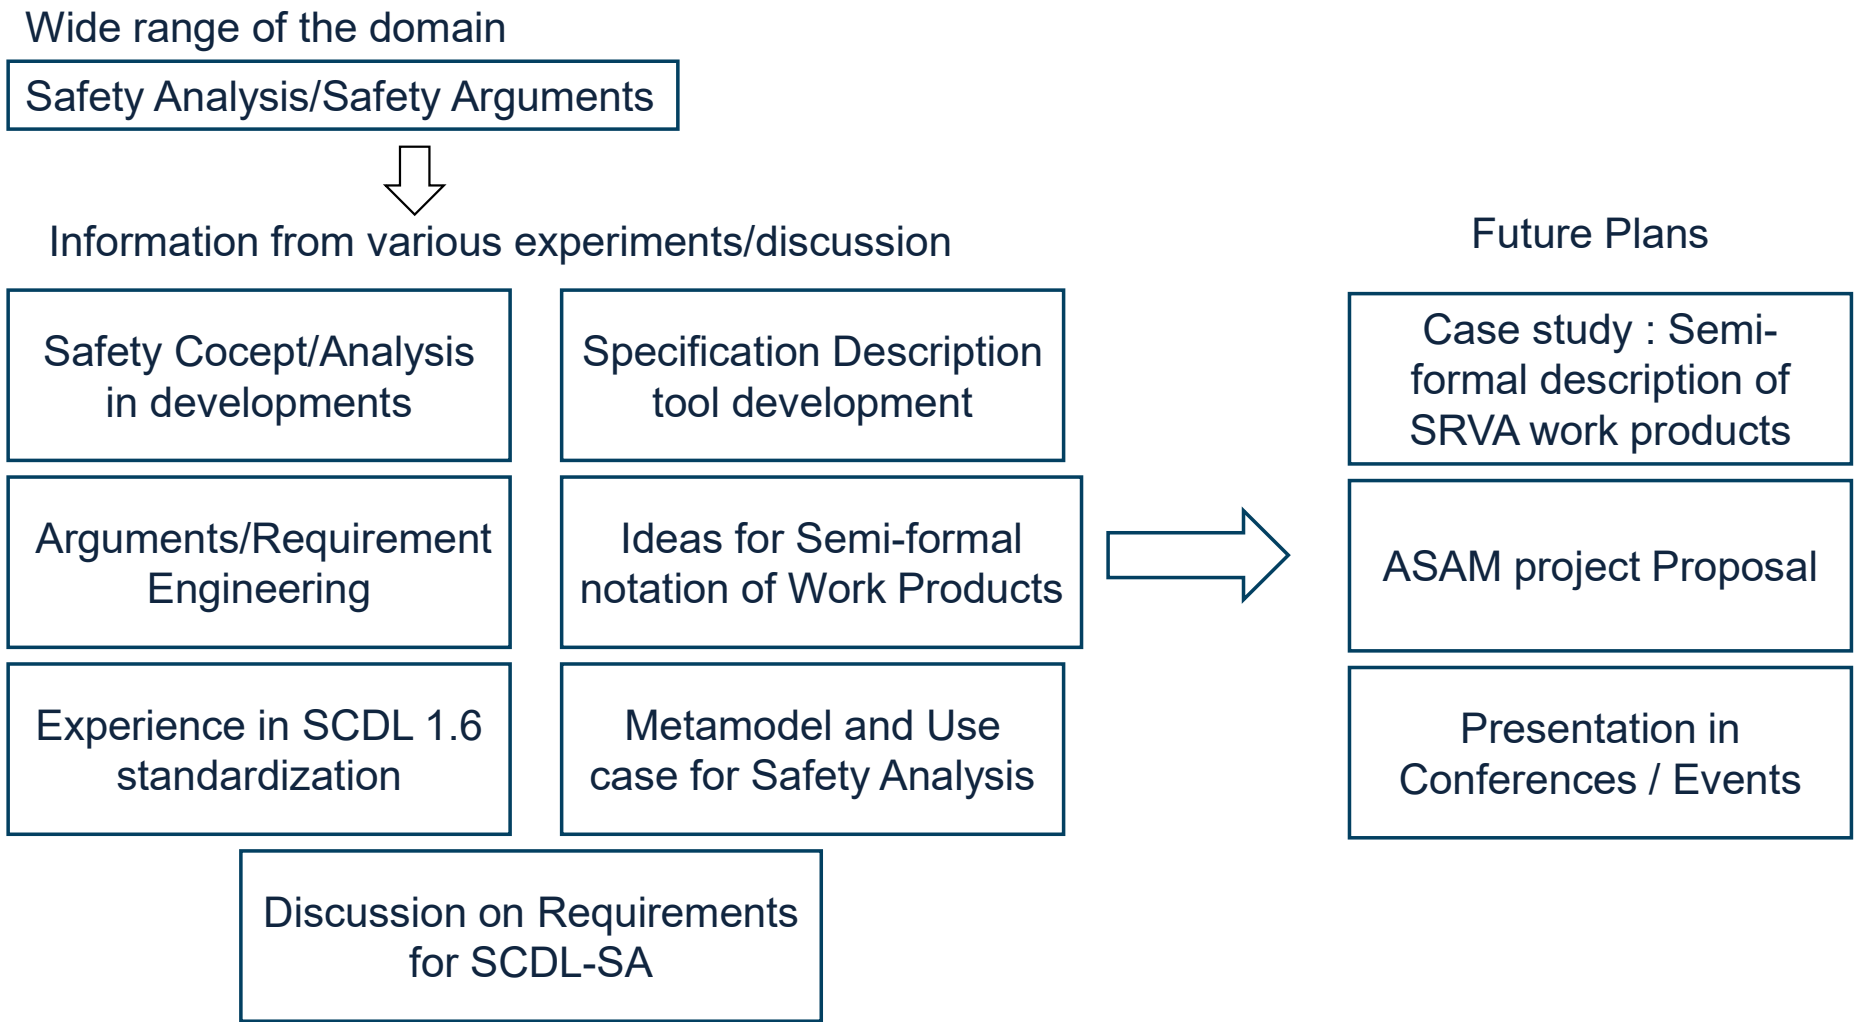

Kenji Ohnishi (GAIO technology)

Kodai Seki (Toyota)

Nobuaki Tanaka (OTSL)

Chair : Shuhei Yamashita (DNV)

Past/Future Activities of SCDL-SA team

2. Requirements and Discussions

2.1 Needs and HLR(High Level Requirements)

	Needs from investigation/discussion
1	SCDL-SA shall be able to represent the relationship between failures and the Safety Mechanisms in terms of Safety Goal Violations (SGV).
2	SCDL-SA shall be able to build the analysis result of the system from the combination of the analysis results for components.
3	SCDL-SA shall be able to express the Independence btw. Safety Requirements efficiently.
4	SCDL-SA shall be able to align the result of top-down analysis and bottom-up analysis when the requirements are refined.
5	This activity shall provide the pattern(s) of the FTA result which separates the failures of intended functionality and the failures of Safety Mechanism.

HLR for SCDL-SA

New Requirements

1. Representation of the relationship btw. failures and Safety Mechanism
2. Layering Safety Analysis
3. Inductive/Deductive Analysis

Improvement from SCDL1.6

1. Efficient expression for the Independence btw. Safety Requirements

2.2 Changes : SCDL1.6→SCDL Next gen(proposal)

SCDL 1.6

- Defined syntax for Safety Concept
- Assumed the use of Safety Req. table
- Left the selection of Safety Analysis notation

→SCDL Next Gen will provide

- Safety Concept diagram
- Safety Req. specification
- Safety Req. Violation Analysis

SCDL 1.6 Work Products	Item	SCDL 1.7 Work Products

Discussion based on Metamodel

Metamodel for SCDL-SA (draft/simplified)

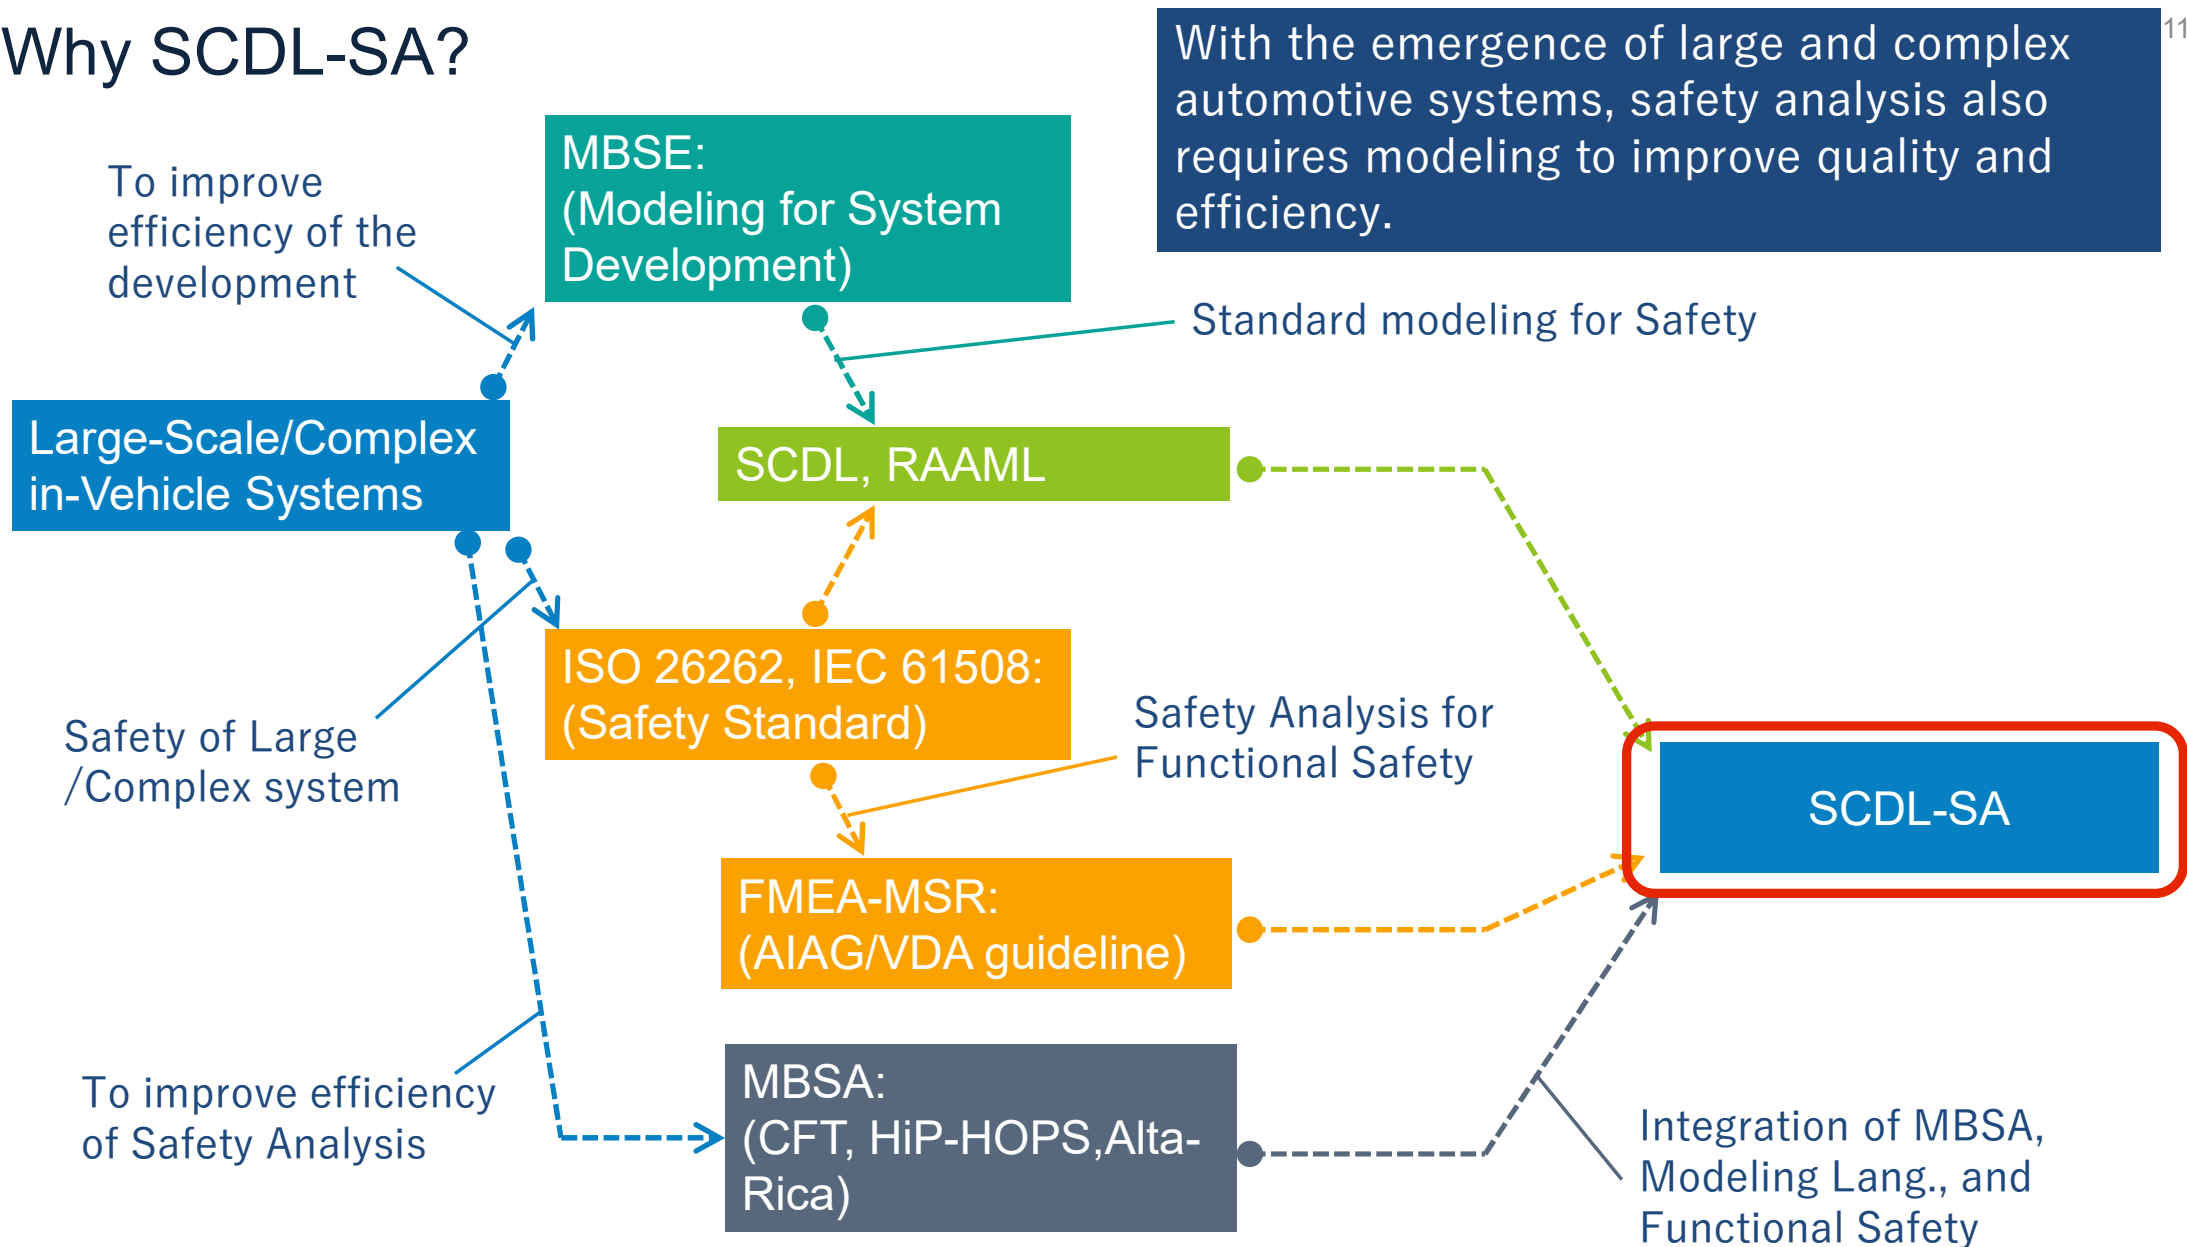

The team is conducting the discussion based on both of Representation and Metamodel for deeper understanding/investigation.

Motivation for standardization

- Technical Background :
 - ▣ Currently, Model-Based Safety Analysis/Argument is an active technical field in academic and industrial organizations.
- Strong needs from the industry :
 - ▣ Efficient implementation of Safety Analysis/Assurance with Semi-formal work products.
- Needs for standardization :
 - ▣ Standard notation and interoperability between different tools /different organizations are necessary for the acceptance of the technology in the large scale development such as automobile, aviation, etc.

Why SCDL-SA?

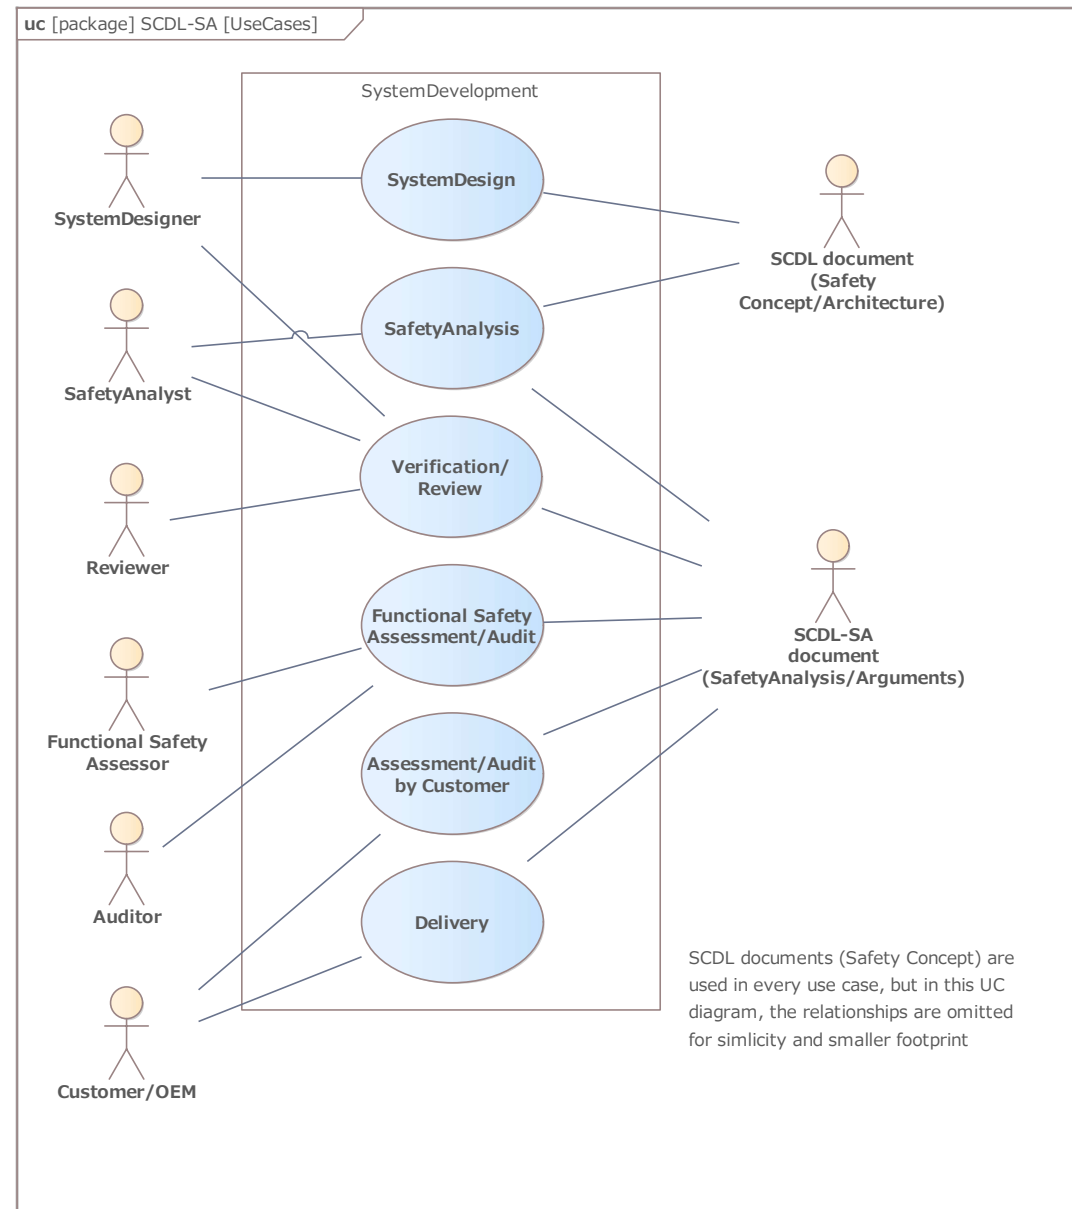

Use cases

□ Communications between :

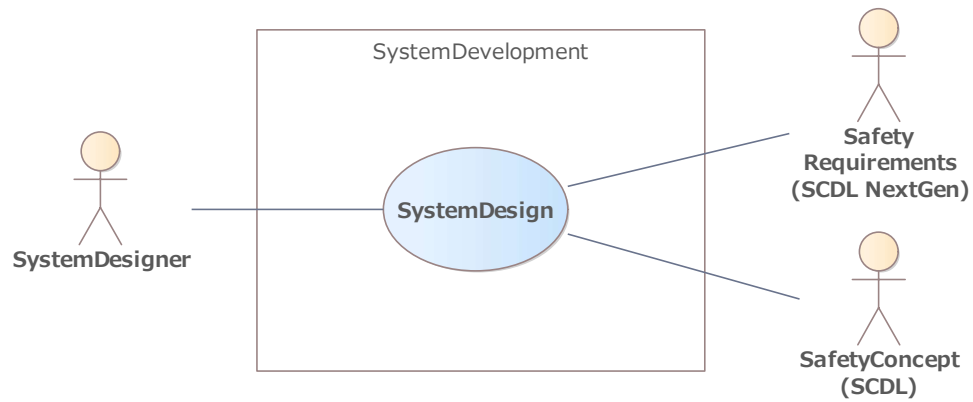

- Verification/Review btw Developers and Safety Analysts (in a development team)
 - Safety Analysts make Safety Analysis results in SCDL-SA format and provide them to Developers to share the analysis result.
- Developer/Safety Analyst and Assessor/Auditor (between divisions)
 - Developers and Safety Analysts build and agree with Safety Analysis result and Safety Arguments in SCDL-SA format and provide them to Assessor and Auditor for assessment and audit.
 - Assessor and Auditor can easily understand the result because of the common understanding of the representation of the work products.
- Supplier and Customer (between companies)
 - Supplier provides the Safety Analysis results and Assurance results in SCDL-SA form.
 - Both company can easily understand the results because of the common understanding of the format.
