

ASAM standards

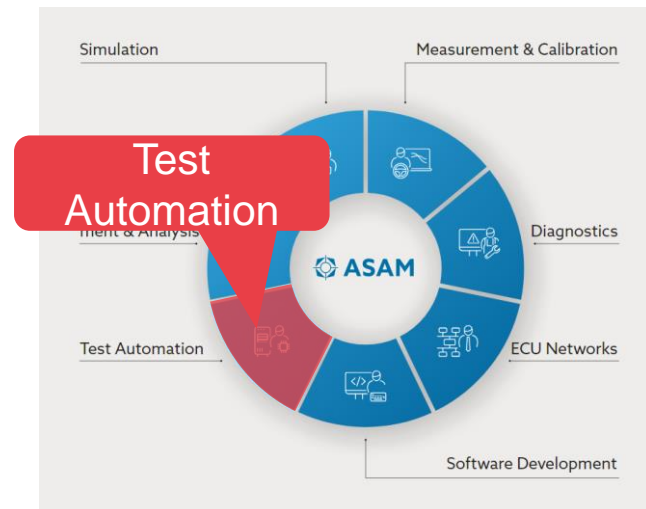

The V-cycle and beyond – covered by ASAM domains

ASAM XIL (Generic Simulator Interface)

Positioning

Version

2.2.0

Format

XML
C#
Python

License

paid

First release

2009

Topics

- Derived from „ASAM HIL“
- Decoupling of test cases from test systems
- Fast transfer of test cases between different test systems
- Cross-tested for verified compliance of implementations
- Technology references in C# and Python

Scope

- API between test automation tools and test benches

Connects with

- **OpenTestSpecification**

Application areas

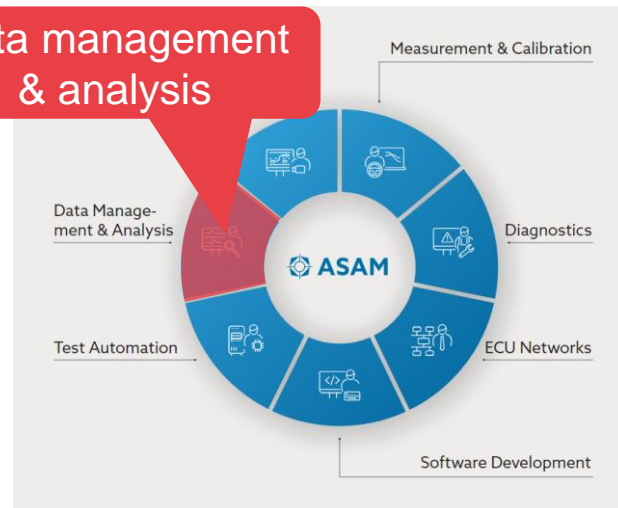

- Test automation with „X-in-the-loop“ systems

ASAM ODS (Open Data Services)

Positioning

Data management
& analysis

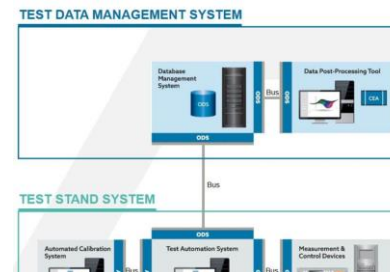

Topics

- One of the first ASAM standards (originating in the 1990s)
- Physical database model (ASAM ODS base model)
- Standardized access layer (ODS API)
- Data exchange format (ATFx file format)
- Cross-tested for verified compliance of implementations

Scope

- Basis for data generation, storage and analysis

Connects with

- [ASAM MDF](#)
- [ASAM OpenLABEL](#)

Application areas

- Test data management for:
 - measurement data
 - fleet test and simulation data
 - big-data applications

Version

6.2.0

Format
