# Positioning of ASAM ODS within ASAM

ASAM ODS is that part of the ASAM standards which focuses on **persistent storage** and **retrieval of data**. ASAM ODS describes the physical storage of information as well as **service interfaces**.

Components of the ASAM ODS standard

# ODS-Standards Evolution

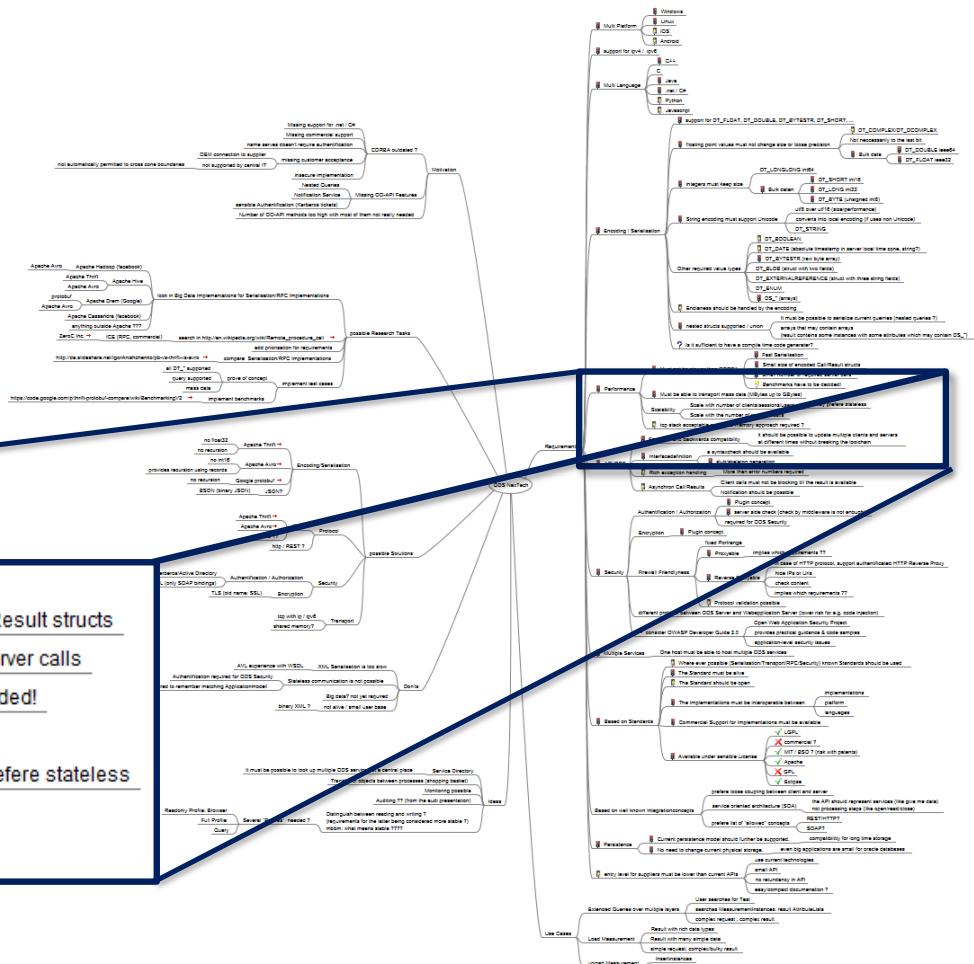

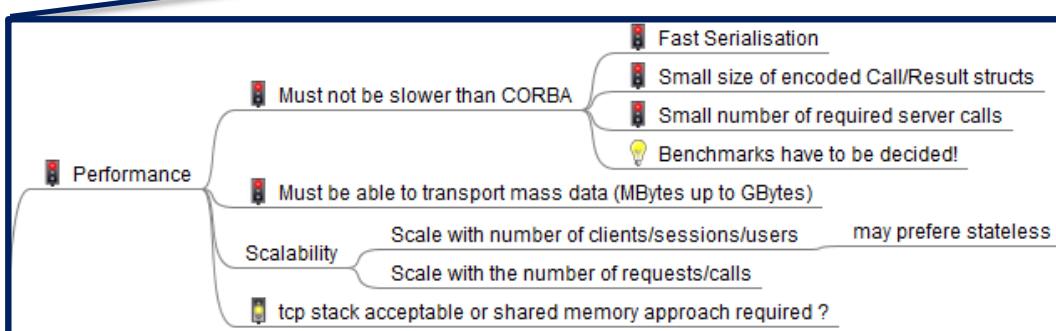

# Key Drivers for ODS 6.0 API

- New communication technology
  - Enterprise IT ready technology stack
  - Encrypted data communication
- Reduce complexity of ODS API
  - Lower entry point for novice developers
  - Increase amount of ASAM ODS experts
- Support for new programming languages
  - Scripting languages
  - Native support for Microsoft .Net languages
- Reduced Support/Acceptance of CORBA infrastructure

# Requirements Definition

... defined > 100 requirements

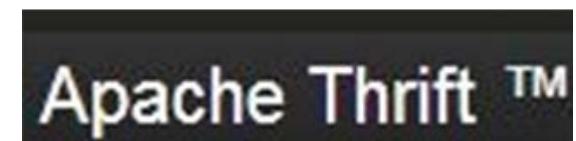

- Functional
  - Non Functional
  - License fee (runtime), support, ...
  - assessed (mandatory – opt.)

# Technology - Research

Voting for communication protocols

Technology	Communication
Google Protobuf	HTTP(s)
Apache Thrift	Thrift

Research budget funded by ASAM

- Fraunhofer IAIS  
(Institute for Intelligent Analysis and Information Systems)

# Result of Evaluation by Fraunhofer

Evaluation report for the applicability of Apache Thrift and Protocol Buffers and a test plan for ASAM ODS 6.0

Category	Apache Thrift	Protocol Buffers / REST	Comment
Platform	36	36	
Language	54	52	
Encoding	$102 + 99 = 201$	$87+105 = 192$	
Performance initial data structure	<b>Serialization</b> <b>Total Time</b> <b>Size</b> <b>Deflated Size</b> $\Rightarrow 40$	<b>Deserialization</b> $\Rightarrow 10$	Each test is weighted with 10
New data structure	<b>File Size (Deserialization)</b> $\Rightarrow 20$	<b>Serialization (Deserialization)</b> <b>Total time</b> $\Rightarrow 30$	
Authentication and Authorization	--	---	In this category both technologies require significant customization, therefore this category is ignored.
Encryption	57	57	
Sustainability	<b>Up-to-dateness</b> <b>Maturity</b> <b>Support</b> $\Rightarrow 30$	<b>Up-to-dateness</b> <b>Maturity</b> $\Rightarrow 20$	Each listed is weighted with 10
<b>Total Score</b>	<b>438</b>	<b>397</b>

## Defined Test – Matrix

- Complex query structures
- Network
- Fast (SSL) / slow (SSL) / WAN
- Java / C++ / C#
- Windows / Linux
- Compared to CORBA
- Performance tests

# ODS 6.0 Standard Specification

## NEW additional HTTP-API

- Google Protocol Buffers 3.0 Serialisation
- W3C HTTPS transport protocol
- REST API based Interface definition
- Authentication
- W3C SSE Notification Service

## What we have learned from the past ?

- Simplify interface
- Documentation
- Example programs

# Abstract ODS 6.0 Technology - Overview

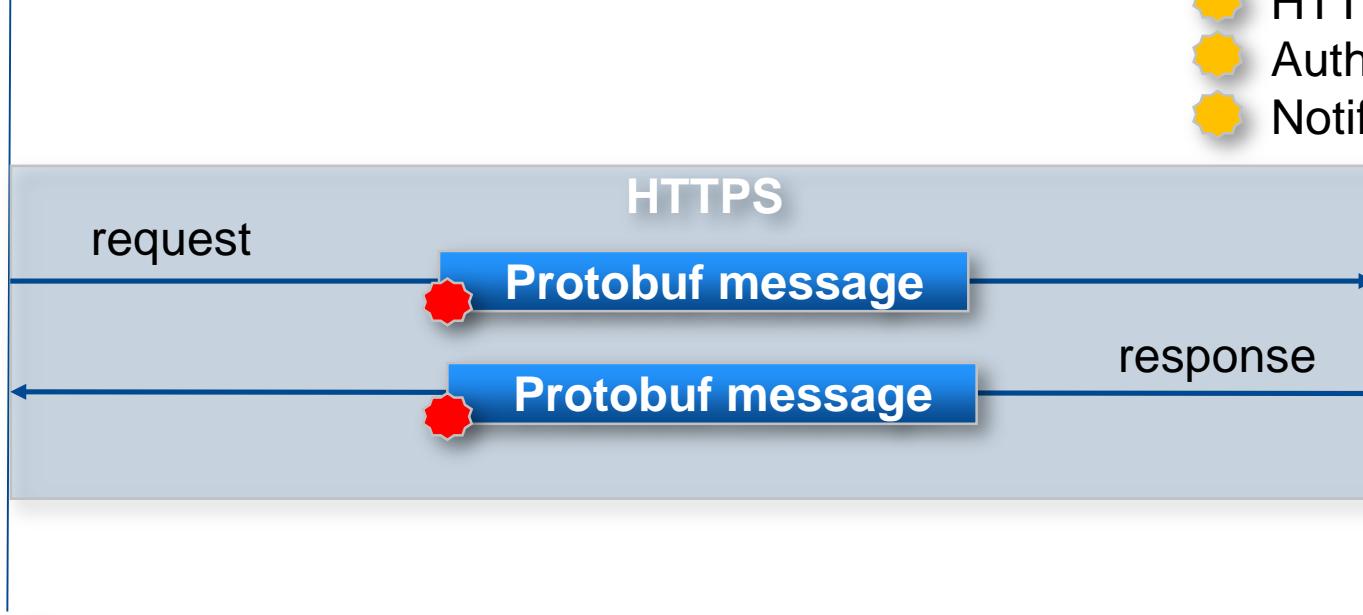

Client

Server

-  HTTP-API
-  Authentication
-  Notification

-  HTTP API documentation
-  .proto definition files

# ODS 6.0 Interface simplification

ODS 5.3.1 OO-API has > 200 methods => subset only used

ODS 6.0 HTTP-API has only **30** functions

## Common #15:

- Connection Handling
- Descriptive and Measurement Data
- Transaction Handling

## Specific #15:

- Application Model modification
- Security Administration
- Event Notification
- Miscellaneous functions

# ODS 6.0 – Connection API

Methods for opening and closing the connection to a server.

HTTP	PATH	ACTION
POST	{baseURI}/ods	
DELETE	{baseURI}/ods/{conl}	
POST	{baseURI}/ods/{conl}/context-read	
POST	{baseURI}/ods/{conl}/context-update	

# ODS 6.0 Data Access API

Methods for read, write and modify descriptive and mass data

HTTP	PATH	ACTION
POST	{baseURI}/ods/{conl}/	<b>data-read</b>
POST	{baseURI}/ods/{conl}/	<b>valuematrix-read</b>
POST	{baseURI}/ods/{conl}/	<b>data-create</b>
POST	{baseURI}/ods/{conl}/	<b>data-update</b>
POST	{baseURI}/ods/{conl}/	<b>data-delete</b>
POST	{baseURI}/ods/{conl}/	<b>data-copy</b>
POST	{baseURI}/ods/{conl}/	<b>n-m-relation-read</b>
POST	{baseURI}/ods/{conl}/	<b>n-m-relation-write</b>

# ODS 6.0 Notification API

Methods for register and receive notifications from the server.

Events for :

- Instances (new, changed, deleted)
- Application model changes
- Security setting changes

HTTP	PATH	ACTION
POST	{baseURI}/	events/{recl}
DELETE	{baseURI}/	events/{recl}
GET	{baseURI}/	events/{recl}

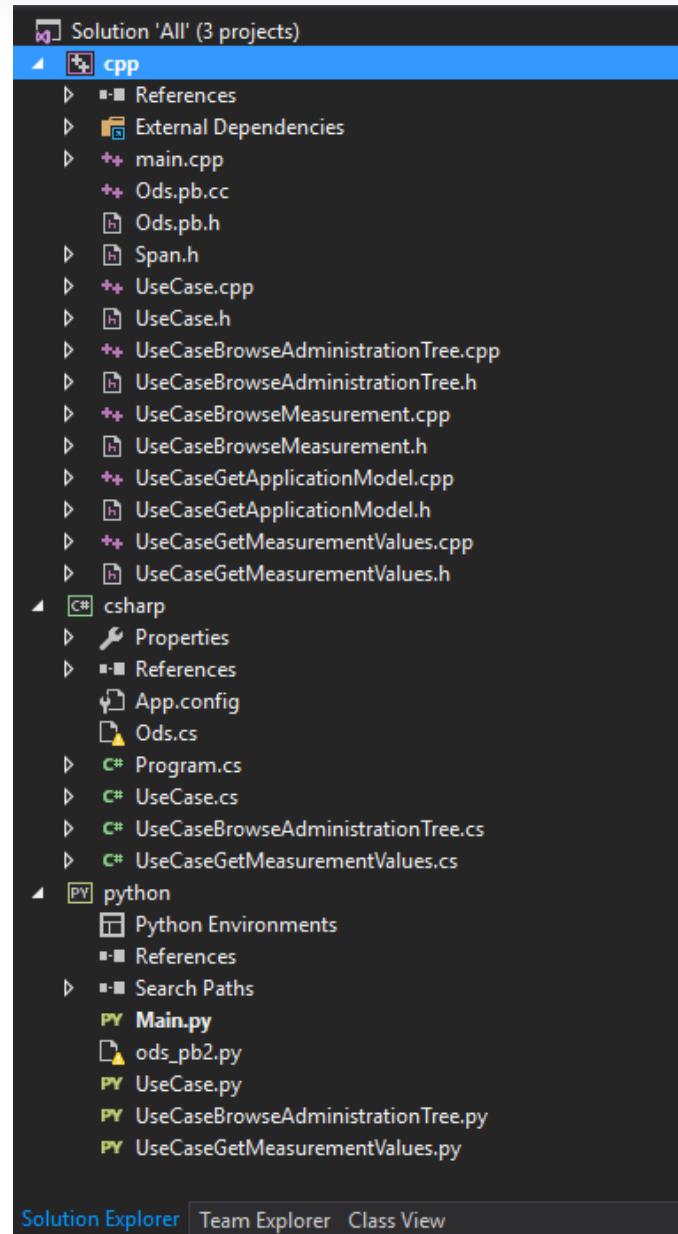

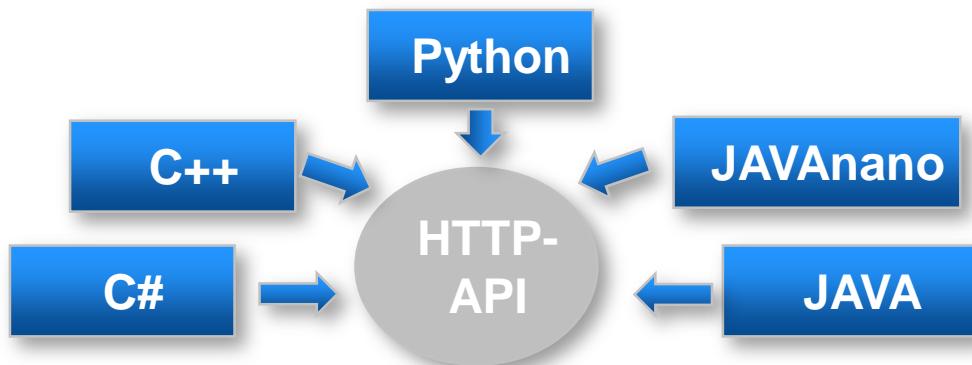

# Example Programs

Demonstrate dynamic behaviour of API

Use-Case oriented Example Programs

- Connection Handling
- Data-model Handling
- (Mea)Data Handling

Examples provided for

# Content of ODS 6.0 Specification

## Base Standard Documentation

- Base Model, ATF, Physical Storage, OO-API, HTTP-API, Mime Types, ...

## Base Standard Model and Interface Definitions

- Model
- CORBA API
- RPC API
- HTTP API
- XML Schema files

## Associated Standards Documentation

- NVH, Calibration, Geometry, Workflow and Bus Data

## Examples

- ATF, ATFX
- HTTP API examples
- Extended Query CORBA example

# Conclusion ASAM ODS 6.0

Using **latest** IT communication **technology**

**Simplified** ODS **API**

**Example programs** for easy getting started

Can completely **substitute** the former **OO-API** of ODS 5.x
